Focussing on third year undergraduate and postgraduate topics, the text explores sports injury in relation to biomechanics. Part One presents a detailed examination of sports injury including the properties of biological materials, mechanisms of injury, occurrence, risk reduction, and the estimation of forces in biological structures. Part Two concentrates on the biomechanical enhancement of sports performance and covers in detail the analysis of sports technique, statistical and mathematical modelling of sports movements, and the feedback of results to improve performance. Each chapter features an introduction, summary, references, example exercises, and suggestions for further reading, making this an invaluable textbook for students who wish to specialize in sports biomechanics or sports injury and rehabilitation.

Biomechanics Sean P. Flanagan, 2014 *Biomechanics: A Case Based Approach* focuses on the comprehension, retention, and application of the core concepts of biomechanics using problem-based learning strategies. The book features a broad range of case studies and examples to illustrate key content throughout the text. Relevant and realistic problems provide students with the opportunity to associate what they are learning in class to real life applications in the field. This text offers a unique approach to understanding biomechanical concepts through the use of mathematical problems. The conversational writing style engages students' attention while not sacrificing the rigor of the content. Case studies and real world examples illustrate key content areas while competency checks located at the conclusion of each major section correspond to the first three areas of Bloom's Taxonomy: remember, understand, and apply. The text employs the technique of guided discovery to ensure that all students understand the concepts of biomechanics. To accommodate a variety of student learning styles, content is presented physically, graphically, and mathematically. Key features: Presentation of concepts in an easy-to-read, engaging writing style and visual layout; Learning Objectives found at the beginning of each chapter address the objectives of each lesson; Definitions presented in the margins of the text help define new words each time they appear; Important Points provide summaries in the margin throughout the text; Essential Math boxes provide a review of essential math before it is presented in the text; Applied Research helps to illustrate biomechanical concepts; Competency Checks found at the conclusion of major sections ask conceptual and quantitative questions to foster critical thinking and further student comprehension; End of Chapter Pedagogy includes Chapter Summary and Conclusion.
