Making Geometry Come Alive Alfred S. Posamentier, 2000-07-22 Activities in Geometry is a set of versatile enrichment exercises that covers a very broad range of topics in geometry Euclidean post Euclidean and non Euclidean Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to students and show them that there is much more to geometry than proving theorems To demonstrate this aspect of geometry it is necessary for the investigation to be quite different from what students encounter in their basal texts different in both substance and form Presenting activities on

Bobenko TU Berlin, Ulrich Eitner, 2003-07-01 This book brings together two different branches of mathematics the theory of Painlevé and the theory of surfaces Self contained introductions to both these fields are presented It is shown how some classical problems in surface theory can be solved using the modern theory of Painlevé equations In particular an essential part of the book is devoted to Bonnet surfaces i e to surfaces possessing families of isometries preserving the mean curvature function A global classification of Bonnet surfaces is given using both ingredients of the theory of Painlevé equations the theory of isomonodromic deformation and the Painlevé property The book is illustrated by plots of surfaces It is intended to be used by mathematicians and graduate students interested in differential geometry and Painlevé equations Researchers working in one of these areas can become familiar with another relevant branch of mathematics **Algebraic Geometric Codes: Basic Notions** Michael Tsfasman, Serge Vlăduț, Dmitry Nogin, 2022-04-15 The book is devoted to the theory of algebraic geometric codes a subject formed on the border of several domains of mathematics On one side there are such classical areas as algebraic geometry and number theory on the other information transmission theory combinatorics finite

geometries dense packings etc The authors give a unique perspective on the subject Whereas most books on coding theory build up coding theory from within starting from elementary concepts and almost always finishing without reaching a certain depth this book constantly looks for interpretations that connect coding theory to algebraic geometry and number theory There are no prerequisites other than a standard algebra graduate course The first two chapters of the book can serve as an introduction to coding theory and algebraic geometry respectively Special attention is given to the geometry of curves over finite fields in the third chapter Finally in the last chapter the authors explain relations between all of these the theory of algebraic geometric codes
