Potentiating Health and the Crisis of the Immune System S. Fulder, A. Mizrahi, N. Sheinman, 2013-06-29 With all the enormous resources that are invested in medicine it is sometimes a mystery why there is so much sickness still in evidence Our life span though higher than at any time in history has now leveled off and has not significantly increased in the last two generations There is a one third increase in long term illness in the last 20 years and a 44% increase in cancer incidence which are not related to demographic issues In some modern countries the level of morbidity defined as days off work because of sickness has increased by two thirds in this time Despite 1 trillion spent on cancer research in 20 years the War On Cancer has recently been pronounced a complete failure by the U.S. President's Cancer Panel Evidently we still have a long way to go The goal of Health for All by the Year 2000 as the World Health Organization has put it is another forgotten dream As ever the answer will be found in breaking out of the old philosophical patterns and discovering the new as yet unacceptable concepts The problems of medicine today require a Kuhnian breakthrough into new paradigms and new ways of thinking And these new ways will not be mere variations of the old but radical departures This book and the conference upon which it was based is part of a search for these new pathways
