Behavioural Finance By William Forbes:

Behavioural Finance William Forbes, 2009-12-21 Behavioural Finance builds on the knowledge and skills that students have already gained on an introductory finance or corporate finance course. The primary focus of the book is on how behavioural approaches extend what students already know. At each stage the theory is developed by application to the FTSE 100 companies and their valuation and strategy. This approach helps the reader understand how behavioural models can be applied to everyday problems faced by practitioners at both a market and individual company level. The book develops simple formal expositions of existing attempts to model the impact of behavioural bias on investor managers' decisions. Where possible this is done grounding the discussion in practical numerical examples from the financial press and business life.

A Fast and Frugal Finance William P. Forbes, Aloysius Obinna Igboekwu, Shabnam Mousavi, 2019-11-19 *A Fast and Frugal Finance* Bridging Contemporary Behavioural Finance and Ecological Rationality adds psychological reality to classical financial reasoning. It shows how financial professionals can reach better and quicker decisions using the fast and frugal framework for decision making adding dramatically to time and outcome efficiency while also retaining accuracy. The book provides the reader with an adaptive toolbox of heuristic tools and classification systems to aid real world decisions. Throughout financial applications are presented alongside real world examples to help readers solve established problems in finance including stock buying and selling decisions when faced with not only risk but fundamental uncertainty. The book concludes by describing potential solutions to financial problems in the forefront of contemporary debates and calls for taking psychological insights seriously.

The book concludes by describing potential solutions to financial problems in the forefront of contemporary debates and calls for taking psychological insights seriously. Demonstrates how well constructed fast and frugal models can outperform standard models in time and outcome efficiency. Focuses on how financial decisions are made in reality using heuristics rather than how such decisions should be made. Discusses how cognition and the decision making context interact in producing fast and frugal choices that follow ecological rationality. Explores the development of decision making trees in finance to aid in decision making.
