Proceedings, 2001 Multi-Carrier Spread-Spectrum Khaled Fazel, S. Kaiser, 2013-11-11 The benefits and success of

multi carrier MC modulation on one side and the flexibility offered by the spread spectrum SS technique on the other side have motivated many researchers to investigate the combination of both techniques since 1993 This combination known as multi carrier spread spectrum MC SS benefits from the advantages of both systems and offers high flexibility high spectral efficiency simple detection strategies narrow band interference rejection capability etc The basic principle of this combination is straightforward The spreading is performed as direct sequence spread spectrum DS SS but instead of transmitting the chips over a single carrier several sub carriers are employed The MC modulation and demodulation can easily be realized in the digital domain by performing IFFT and FFT operations The separation of the users signals can be performed in the code domain MC SS systems can perform the spreading in frequency direction which allows for simple signal detection strategies Since 1993 MC SS has been deeply studied and new alternative solutions have been proposed Meanwhile deep system analysis and comparison with DS CDMA have been performed that show the superiority of MC CDMA
