Hubble, Humason and the Big Bang Ron Voller, 2021-10-28 The story of Hubble and Humason is one for the ages and in particular the Cosmic Age In this compelling book science writer Ron Voller digs deep into how and why the two scientists continued to investigate their theory of universal expansion in the face of persistent doubt contrary theories and calamitous world events The evolution of this dynamic duo s tenuous friendship and professional partnership is in many ways as intriguing as their groundbreaking work on the evolution of the universe The book therefore traces their lives from their childhoods into their burgeoning careers revealing how a World War and their own personal differences stood in the way of initial cooperation It then shows how despite all this the two opposites eventually came together in the pursuit of something far greater than themselves This grand story is inextricably interwoven with that of Albert Einstein Willem de Sitter and other great physicists of the era all of whom took part in the staggering quest to make sense of the Big Bang and what followed Edwin Hubble has often been considered as an island of sorts a lone wolf of astronomy But Voller s book shows otherwise as he examines Milt Humason s essential contributions to our understanding of the expanding universe Daniel Lewis Dibner Senior Curator History of Science Technology The Huntington Library

Allah's Universe Iftikhar Uddin Hyder, 2025-06-16 Allah s Universe Why God is the Only Explanation for Our Existence is intended to demonstrate that the universe was almost certainly created by God This book is intended for individuals who in order to understand the universe and everything it encapsulates rely on science but in understanding the universe they do not irrationally dismiss the existence of God and His infinite creative power Allah s Universe shows that the universe has been created with laws of nature which are fine tuned to support life as we know it even if intelligent life in it may have an ephemeral existence as compared to its age There are simply too many improbable coincidences which make the universe conducive for life to exist If some of the laws of nature were even slightly different life would not exist This book also attempts to briefly explore the greatest miracle in the universe life About the Author Iftikhar Uddin Hyder is a cosmology

Sacred Science William H. West,2025-04-08 If you review of the impulses that created the universe directed the unfolding of life and empowered human consciousness you reach an undeniable conclusion an omnipotent Creator supervised the unfolding of our universe From the moment of creation to the emergence of a planet tailor made for life from the journey of multi million species to the development of an upright creature hungry for God science tells a sacred story a superintelligent Creator used His mathematical genius to convert lifeless equations into galaxies planets and people His love has been visible throughout the process Could our journey reflect thousands of random accidents with no divine guidance Creation delivered impulses that filled the universe with galaxies and stars Eliminate any one of those blueprints and the universe would have been stillborn Stars produced a perfect mix of elements to bring the universe to life Without a robust ensemble of gene and protein sequences life might still be living at the bottom of the sea Hundreds of human genes convert the neurons of a human infant into trillions of networks in an adult brain Without those God given genes a dangerous world may have left us trapped in the treetops with no interest in science at all But God shared His mind and triggered the emergence of human consciousness Where do we find ourselves after centuries of that scientific

searching We see that science reflects its source Science is a gift of God's creative love and is nothing less than sacred

Moderne Astrophysik trifft auf Ingenieurwissenschaften Mathias Hüfner, 2019-05-06 Wissenschaft beginnt dort wo wir den Mut haben unseren eigenen Glauben zu hinterfragen Kann in einer aufgeklärten Welt die Wissenschaft Magd der Theologie werden wie es in der päpstlichen Enzyklika gegen den Modernismus von 1907 gefordert wurde Kann ein Schöpfer aus dem Nichts den Urknall schaffen Wie unterscheidet sich die geistige Realität eines Beobachters von der materiellen Realität der Außenwelt und wie funktioniert wissenschaftliche Erkenntnis Kann eine materielle Kraft ein geistiges Konzept wie den Raum kreieren Gibt es Schwarze Löcher im Raum worin materielle Gegenstände selbst Licht verschwinden können Woher kommen die Kräfte und wie kann man sie unterscheiden Wie kann eine Welle gleichzeitig ein Teilchen sein und kann man die determiniert beschriebene Makrowelt mit einer statistisch beschriebenen Mikrowelt zu einer Theorie von allem vereinigen Ist das heliozentrische Weltbild noch zeitgemäß oder müssen wir die Schraubenbewegung der Erde um die sich bewegende Sonne in einem intergalaktischen Weltbild neu erklären Diesen und weiteren Fragen geht der Autor in diesem Buch mit kriminalistischem Spürsinn nach Erleben Sie die Physik entwickelt aus einer Perspektive die noch in keinem Lehrbuch steht und finden Sie Antworten auf Fragen die die moderne Astrophysik nicht beantworten kann die aber unser aller Leben betreffen

Modern Astrophysics Meets Engineering Mathias H fner,2020-05-25 Based on the philosophy of nature the book develops a new understanding of the physical world and shows the logical contradictions of modern physics The relationship between the observer and the object of observation is discussed in a dialogue with nature The ideas behind the physical theories that led to the priest Lema tre s Big Bang hypothesis and their logical errors are explained Although the big bang was refuted by the practical results of space travel in the second half of the 20th century the astrophysicists hold fast to the

mechanistic world view and stubbornly deny the electrodynamics of the cosmos Has modern physics really become a maid of theology in the embrace of the Catholic Church as Pope Pius X demanded in his encyclical of 1907 against modernity On the basis of the physical measurement system the basics of physics are explained and the relationship between measurement and the object to be measured is considered The cause of the force between the positive and negative charge of proton and electron is seen in an open system that is far from the thermodynamic equilibrium This perspective allows the structure maintenance and destruction of a structure to be explained using entropy The structure of the cosmos can then be understood as an electrical network based on Maxwell s equations from the atom to the largest cosmic structures In this way electrodynamics and optics as well as plasma physics become the basis of this new intergalactic world view Such a view of the world can already explain many of the phenomena discovered from space travel which seem extremely puzzling to the conventional mechanical gravitational world view of astrophysicists and by means of a number of exotic constructs such as black holes and neutron stars dark matter antimatter and dark energy be explained by them The book is based on over two hundred mostly primary sources of literature It requires an open mind and a basic knowledge of mathematics and classical physics as high schools should convey *God the Geometer* Thomas J. McAvoy, 2024-02-16 Faith is under assault today in the media and on college campuses Numerous recent surveys show that college professors and contemporary scientists have lower religiosity compared to the general population Parents are concerned that their children s faith is not as strong as it should be Unfortunately scientific advances can lead people to think that faith is passe supplanted by science and no longer necessary The average person is in awe of the accomplishments of science but overwhelmed by their complexity The purpose of this book is to demonstrate what one can learn from modern science that leads to the conclusion that God created our universe This book demonstrates how cosmology physics astronomy and evolution do not conflict with faith but actually strongly support faith in God The title of this book *God the Geometer* describes an image which appeared in a thirteenth century codex The image conveys the message that God created the universe using geometric and harmonic principles
