Handbook of Dynamic Data Driven Applications Systems Frederica Darema, Erik P. Blasch, Sai Ravela, Alex J. Aved, 2023-09-14 This Second Volume in the series Handbook of Dynamic Data Driven Applications Systems DDDAS expands the scope of the methods and the application areas presented in the first Volume and aims to provide additional and extended content of the increasing set of science and engineering advances for new capabilities enabled through DDDAS The methods and examples of breakthroughs presented in the book series capture the DDDAS paradigm and its scientific and technological impact and benefits The DDDAS paradigm and the ensuing DDDAS based frameworks for systems analysis and design have been shown to engender new and

advanced capabilities for understanding analysis and management of engineered natural and societal systems applications systems and for the commensurate wide set of scientific and engineering fields and applications as well as foundational areas The DDDAS book series aims to be a reference source of many of the important research and development efforts conducted under the rubric of DDDAS and to also inspire the broader communities of researchers and developers about the potential in their respective areas of interest of the application and the exploitation of the DDDAS paradigm and the ensuing frameworks through the examples and case studies presented either within their own field or other fields of study As in the first volume the chapters in this book reflect research work conducted over the years starting in the 1990 s to the present Here the theory and application content are considered for Foundational Methods Materials Systems Structural Systems Energy Systems Environmental Systems Domain Assessment address challenges that ML alone does not and also show how ML in combination with DDDAS based methods can deliver the advanced capabilities sought likewise infusion of DDDAS like approaches in NN methods strengthens such methods Moreover the DDDAS based Digital Twin or Dynamic Digital Twin goes beyond the traditional DT notion where the model and the physical system are viewed side by side in a static way to a paradigm where the model dynamically interacts with the physical system through its instrumentation per the DDDAS feed back control loop between model and instrumentation

Tracking and Sensor Data Fusion Wolfgang Koch,2013-09-20

Sensor Data Fusion is the process of combining incomplete and imperfect pieces of mutually complementary sensor information in such a way that a better understanding of an underlying real world phenomenon is achieved Typically this insight is either unobtainable otherwise or a fusion result exceeds what can be produced from a single sensor output in accuracy reliability or cost This book provides an introduction Sensor Data Fusion as an information technology as well as a branch of engineering science and informatics Part I presents a coherent methodological framework thus providing the prerequisites for discussing selected applications in Part II of the book The presentation mirrors the author s views on the subject and emphasizes his own contributions to the development of particular aspects With some delay Sensor Data Fusion is likely to develop along lines similar to the evolution of another modern key technology whose origin is in the military domain the Internet It is the author s firm conviction that until now scientists and engineers have only scratched the surface of the vast range of opportunities for research engineering and product development that still waits to be explored the Internet of the Sensors

Bayesian Theory and Applications Paul Damien,Petros Dellaportas,Nicholas G. Polson,David A. Stephens,2013-01-24 The development of hierarchical models and Markov chain Monte Carlo MCMC techniques forms one of the most profound advances in Bayesian analysis since the 1970s and provides the basis for advances in virtually all areas of applied and theoretical Bayesian statistics This volume guides the reader along a statistical journey that begins with the basic structure of Bayesian theory and then provides details on most of the past and present advances in this field The book has a unique format There is an explanatory chapter devoted to each conceptual advance followed by journal style chapters

that provide applications or further advances on the concept Thus the volume is both a textbook and a compendium of papers covering a vast range of topics It is appropriate for a well informed novice interested in understanding the basic approach methods and recent applications Because of its advanced chapters and recent work it is also appropriate for a more mature reader interested in recent applications and developments and who may be looking for ideas that could spawn new research Hence the audience for this unique book would likely include academicians practitioners and could likely be required reading for undergraduate and graduate students in statistics medicine engineering scientific computation business psychology bio informatics computational physics graphical models neural networks geosciences and public policy The book honours the contributions of Sir Adrian F M Smith one of the seminal Bayesian researchers with his papers on hierarchical models sequential Monte Carlo and Markov chain Monte Carlo and his mentoring of numerous graduate students the chapters are authored by prominent statisticians influenced by him Bayesian Theory and Applications should serve the dual purpose of a reference book and a textbook in Bayesian Statistics

Advanced Kalman Filtering, Least-Squares and Modeling

Bruce P. Gibbs, 2011-03-29 This book is intended primarily as a handbook for engineers who must design practical systems Its primary goal is to discuss model development in sufficient detail so that the reader may design an estimator that meets all application requirements and is robust to modeling assumptions Since it is sometimes difficult to a priori determine the best model structure use of exploratory data analysis to define model structure is discussed Methods for deciding on the best model are also presented A second goal is to present little known extensions of least squares estimation or Kalman filtering that provide guidance on model structure and parameters or make the estimator more robust to changes in real world behavior A third goal is discussion of implementation issues that make the estimator more accurate or efficient or that make it flexible so that model alternatives can be easily compared The fourth goal is to provide the designer analyst with guidance in evaluating estimator performance and in determining correcting problems The final goal is to provide a subroutine library that simplifies implementation and flexible general purpose high level drivers that allow both easy analysis of alternative models and access to extensions of the basic filtering Supplemental materials and up to date errata are downloadable at <http://booksupport.wiley.com>

Modulares multisensorielles Indoor Navigationssystem Christian Ascher, 2014 Die vorliegende Arbeit befasst sich mit der Entwicklung eines modularen multisensoriellen Indoor Navigationssystems mit dem Namen IndoorGuide Dieser dient der Unterstützung von Einsatzkräften wie Polizei und Feuerwehr Herzstück ist das so genannte Dual IMU Konzept Dabei werden Inertialsensoreinheiten an Torso und Fuß barometrischer Höhenmesser und elektronischer Kompass zu einem Gesamtkonzept kombiniert welches bereits eine kurzzeitgenaue Navigationslösung liefert Zur Langzeitstützung werden Algorithmen zur Nutzung von globalen Navigationssystemen GNSS in urbanem Gebiet vorgestellt Zudem wird ein lokales Funksystem UWB für den Einsatz in Innenräumen evaluiert Ebenso wird die Verwendung digitaler Gebädekarten von mehrstöckigen Gebäuden bis hin zu Industrieanlagen mit Hilfe von Map Matching Algorithmen aufgezeigt Zur

Lokalisierung in unkartierten Gebüden kann der IndoorGuide zusätzlich mit einem Laserentfernungsmesser erweitert werden. Basierend auf dessen Entfernungsmessungen kann mit einem graphenbasierten SLAM Ansatz eine sehr detaillierte Karte der Umgebung erstellt werden. Das Zusammenspiel der aufgezeigten Methoden wird schließlich anhand eines Echtzeit Demonstrators im Einsatz präsentiert.

Audio-visual Person Tracking: A Practical Approach Fotios Talantzis, Aristodemos Pnevmatikakis, Anthony G Constantinides, 2011-12-23 This book deals with the creation of the algorithmic backbone that enables a computer to perceive humans in a monitored space. This is performed using the same signals that humans process in audio and video. Computers reproduce the same type of perception using sensors and algorithms in order to detect and track multiple interacting humans by way of multiple cues like bodies, faces or speech. This application domain is challenging because audio and visual signals are cluttered by both background and foreground objects. First, particle filtering is established as the framework for tracking. Then audio-visual and also audio-visual tracking systems are separately explained. Each modality is analyzed starting with sensor configuration, detection for tracker initialization and the trackers themselves. Techniques to fuse the modalities are then considered. Instead of offering a monolithic approach to the tracking problem, this book also focuses on implementation by providing MATLAB code for every presented component. This way the reader can connect every concept with corresponding code. Finally, the applications of the various tracking systems in different domains are studied.

Computational Intelligence in Emerging Technologies for Engineering Applications Orestes Llanes Santiago, Carlos Cruz Corona, Antônio José Silva Neto, José Luis Verdegay, 2020-02-14 This book explores applications of computational intelligence in key and emerging fields of engineering, especially with regard to condition monitoring and fault diagnosis, inverse problems, decision support systems and optimization. These applications can be beneficial in a broad range of contexts including water distribution networks, manufacturing systems, production and storage of electrical energy, heat transfer, acoustic levitation, uncertainty and robustness of infinite dimensional objects, fatigue failure prediction, autonomous navigation, nanotechnology and the analysis of technological development indexes. All applications, mathematical and computational tools and original results are presented using rigorous mathematical procedures. Further, the book gathers contributions by respected experts from 22 different research centers and eight countries: Brazil, Cuba, France, Hungary, India, Japan, Romania and Spain. The book is intended for use in graduate courses on applied computation, applied mathematics and engineering, where tools like computational intelligence and numerical methods are applied to the solution of real-world problems in emerging areas of engineering.
