Fuzzy Model Identification Hans Hellendoorn, Dimiter Driankov, 2012-12-06 During the past few years two principally different approaches to the design of fuzzy controllers have emerged heuristics based design and model based design The main motivation for the heuristics based design is given by the fact that many industrial processes are still controlled in one of the following two ways The process is controlled manually by an experienced operator The process is controlled by an automatic control system which needs manual on line trimming of its parameters by an experienced operator In both cases it is enough to translate in terms of a set of fuzzy if then rules the operator s manual control algorithm or manual on line trimming

strategy in order to obtain an equally good or even better wholly automatic fuzzy control system This implies that the design of a fuzzy controller can only be done after a manual control algorithm or trimming strategy exists It is admitted in the literature on fuzzy control that the heuristics based approach to the design of fuzzy controllers is very difficult to apply to multiple input/multiple output control problems which represent the largest part of challenging industrial process control applications Furthermore the heuristics based design lacks systematic and formally verifiable tuning techniques Also studies of the stability performance and robustness of a closed loop system incorporating a heuristics based fuzzy controller can only be done via extensive simulations **XXIX Messtechnisches Symposium** Thomas Fröhlich, Eberhard Manske, 2015-09-14
