Due to changes in lifestyle people spend more time indoors This refers not only to the time spent at home and at office premises but also in shopping malls recreation centers and transport vehicles Concentrations of many pollutants are higher indoors than they are outdoors Consequently the indoor environment has a bigger impact on human health well being and effectiveness Indoor Environment Engineering is a relatively new scientific discipline with an interdisciplinary character using knowledge from chemistry biology medicine and engineering Since the early 1990s the number of studies in this area has grown significantly from research on indoor air parameters new emerging pollutants in indoor air energy saving systems of heating to studies on ventilation and air conditioning in buildings Even though much progress has been made since then a number of questions still remains open How can indoor air quality be measured What are reliable time and cost efficient methods How can indoor air quality be improved investing as little energy as possible How to minimize secondary pollution caused by air supply systems Which type of pollutants should research focus on In what way are we exposed to new pollutants plasticizers flame retardants pesticides What is their impact on our health Management of Indoor Air Quality is a collection of 14 peer reviewed papers in Indoor Environment Engineering addressing the above issues It includes research on HVAC impact on aerosol levels new ventilation systems as well as air quality problems in new environments The volume is intended for scientists engineers post graduate and graduate students interested in the area of indoor environment **Use**

of Biocidal Surfaces for Reduction of Healthcare Acquired Infections Gadi Borkow,2014-08-02 The notion that contaminated environments in hospital settings significantly contribute to the risk of an individual acquiring an infection while hospitalized is continuously gaining recognition by the medical community There is a clear correlation between the environmental bioburden present in a clinical setting and the risk of patients acquiring an infection Thus using self disinfecting surfaces can be a very important adjunct in the fight against nosocomial pathogens This book reviews the increasing evidence that contaminated non intrusive soft and hard surfaces located in the clinical surroundings are a source of nosocomial pathogens and focuses on the utility of copper containing materials in reducing bioburden and fighting hospital acquired infections It also reviews other biocidal surface alternatives and the economics of using biocidal surfaces in a hospital environment Finally it discusses the pros and cons of existent disinfection modalities other than biocidal surfaces
