The author claims this experimental fact is bound to change biology forever This book shows how this very discovery reveals that coding is a new mechanism of life just as the discovery of electromagnetism revealed the existence of a new physical force in the universe The existence of many biological codes furthermore Barbieri argues is one of those experimental facts that have extraordinary theoretical consequences It implies that coding is not only a mechanism that constantly operates in all living systems but also a mechanism of evolution more precisely a mechanism that gave origin to the absolute novelties of the history of life This amounts to saying that evolution took place by two distinct mechanisms by natural selection and by natural conventions two mechanisms that are fundamentally different because natural selection is the result of copying and deals with information whereas natural

conventions are the result of coding and deal with meaning This volume appeals to students and researchers working in the fields of semiotics philosophy biology and mathematics Film and Video Finder, 1997, 1997 Educators Guide to Free Eureka!
