Miscellaneous Publication ,1979 *Energy and Climate in the Urban Built Environment* M. Santamouris, 2013-06-17 Both the number and percentage of people living in urban areas is growing rapidly Up to half of the world s population is expected to be living in a city by the end of the century and there are over 170 cities in the world with populations over a million Cities have a huge impact on the local climate and require vast quantities of energy to keep them functioning The urban environment in turn has a big impact on the performance and needs of buildings The size scale and mechanism of these interactions is poorly understood and strategies to mitigate them are rarely implemented This is the first comprehensive book to address these questions It arises out of a programme of work POLISTUDIES carried out for the Save programme of the European Commission Chapters describe not only the main problems encountered such as the heat island and canyon effects but also a range of design solutions that can be adopted both to improve the energy performance and indoor air quality of individual buildings and to look at aspects of urban design that can reduce these climatic effects The book concludes with some examples of innovative urban bioclimatic buildings The project was co ordinated by Professor Mat Santamouris from the University of Athens who is also the editor of the book Other contributions are from the University of Thessaloniki Greece ENTPE Lyons France and the University of Stuttgart Germany **Environmental Engineering IV**

Artur Pawlowski, Marzenna R. Dudzinska, Lucjan Pawlowski, 2013-05-21 Environmental engineering has a leading role in the elimination of ecological threats and deals in brief with securing technically the conditions which create a safe environment for mankind to live in. Due to its interdisciplinary character it can deal with a wide range of technical and technological problems. Since environmental engineering uses the knowledge of the basic sciences biology, chemistry, biochemistry and physics it is able to neutralise pollution in all the elements of the environment i.e. the hydrosphere, atmosphere and lithosphere. Moreover, environmental engineering deals with the design and maintenance of systems of water supply, sewage disposal, heating, ventilation and air conditioning in buildings. Environmental Engineering IV contains 77 peer-reviewed papers selected from 527 presented at the 4th Congress of Environmental Engineering, Lublin, Poland, 2-5 September 2012. The contributions are divided into 7 chapters: Water supply, Water and wastewater treatment, Neutralization of solid wastes and sludge, Air protection and quality, Indoor microclimate, Energy, Biology and technology. Environmental Engineering IV assesses the state of scientific research in various areas of environmental engineering, evaluates the organizational, technical and technological progress made in contributing to ecological security and determines the place of environmental engineering in sustainable development, taking into account current political and economic conditions, and is a valuable source of information for the environmental engineering professional and academic community.

Building Services and Energy Efficient Buildings Dirk Bohne, 2023-07-12 The completely revised basic work presents itself at the state of the art. The numerous explanations on sustainable building systems are brought together in the new chapter Energy Concepts. The technical content is condensed according to the facts and contexts relevant to architects and civil engineers. The extensive illustration section with detailed drawings for pictorial commentary on the text has been revised and updated. The book thus remains an indispensable basic work for keeping pace with the dynamic technological development, the increasing demands for comfort and the requirements for an economical and environmentally friendly use of energy in technical building.
