Design Methods for Reactive Systems Roel Wieringa,2003 This book provides a framework for software design that shows where the techniques and approaches of design methods for software systems fit in It discusses three methods in detail and demonstrates how to pick techniques from each of them It also shows how to follow problem solving steps that focus on the design problem rather than on the method **Advanced Information Systems Engineering** Klaus R. Dittrich,Andreas Geppert,Moira C. Norrie,2003-05-15 Since the late 1980s the CAiSE conferences have provided a forum for the p sentation and exchange of research results and practical experiences within the eld of Information Systems Engineering CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Int laken located near the three famous Swiss mountains the Eiger M onch and Jungfrau The rst two days consisted of pre conference workshops and tutorials The workshop themes included requirements engineering evaluation of modeling methods data integration over the Web agent oriented information systems and the design and management of data warehouses Continuing the tradition of recent CAiSE conferences there was also a doctoral consortium The p conference tutorials were on the themes of e business models and XML appli tion development The main conference program included three invited speakers two tuto als and a panel discussion in addition to presentations of the papers in these proceedings We also included a special practice and experience session to give presentersanopportunitytoreportonanddiscussexperiencesandinvestigations on the use of methods and technologies in practice Weextendourthankstothemembersoftheprogramcommitteeandallother referees without whom such conferences would not be possible The program committee whose members came from 20 di erent countries selected 27 hi quality research papers and 3 experience reports from a total of 97 submissions The topics of these papers span the wide range of topics relevant to information systems engineering from requirements and design through to implementation and operation of complex and dynamic systems Algorithmics David Harel,Yishai A. Feldman,2004 Now updated in its third edition this book concerns the concepts ideas methods and results fundamental to computer science It is about the science of computing and is aimed at the technically orientated reader as well as the computer professional Formal Methods for Components and Objects Frank S.de Boer,2003-10-09 This book presents revised tutorial lectures given by invited speakers at the First International Symposium on Formal Methods for Components and Objects FMCO 2002 held in Leiden The Netherlands in November 2002 The 21 revised lectures by leading researchers present a comprehensive account of the potential of formal methods applied to complex software systems such as components and object systems The book makes a unique contribution to bridging the gap between theory and practice in software engineering **Global Business Information Technology** Geoffrey Elliott,2004 Students of Business Information Technology and Business Information Systems will find this book a thorough and engaging introduction to the subject area Rooted in the global environment in which today s organisations

operate this book offers a comprehensive treatment of one of the most dynamic exciting and challenging areas of study within business and management Global Business Information Technology Systems Theory and Practice describes how technology is being used to gather interpret and communicate business information at an ever more sophisticated level The book introduces the basics of computer and communications technologies in a clear jargon free style with It s case examples did you know and activity features helps the student see the theory in practice Self check questions and website material encourage students to track their learning and progress   *Advanced Information Systems Engineering* Johann Eder,2003-06-05 This book constitutes the refereed proceedings of the 15th International Conference on Advanced Information Systems Engineering CaiSE 2003 held in Klagenfurt Austria in June 2003 The 45 revised full papers presented together with 3 invited contributions were carefully reviewed and selected from 219 submissions The papers are organized in topical sections on XML methods and models for information systems UML Internet business and social modeling peer to peer systems ontology based methods advanced design of information systems knowledge knowledge management Web services data warehouses electronic agreements and workflow requirements engineering metrics and method engineering and agent technologies and advanced environments   **Model-Based Methodologies for Pervasive and Embedded Software** Ricardo J. Wieringa,2014-11-19 This book provides guidelines for practicing design science in the fields of information systems and software engineering research A design process usually iterates over two activities first designing an artifact that improves something for stakeholders and subsequently empirically investigating the performance of that artifact in its context This validation in context is a key feature of the book since an artifact is designed for a context it should also be validated in this context The book is divided into five parts Part I discusses the fundamental nature of design science and its artifacts as well as related design research questions and goals Part II deals with the design cycle i e the creation design and validation of artifacts based on requirements and stakeholder goals To elaborate this further Part III presents the role of conceptual frameworks and theories in design science Part IV continues with the empirical cycle to investigate artifacts in context and presents the different elements of research problem analysis research setup and data analysis Finally Part V deals with the practical application of the empirical cycle by presenting in detail various research methods including observational case studies case based and sample based experiments and technical action research These main sections are

complemented by two generic checklists one for the design cycle and one for the empirical cycle The book is written for students as well as academic and industrial researchers in software engineering or information systems It provides guidelines on how to effectively structure research goals how to analyze research problems concerning design goals and knowledge questions how to validate artifact designs and how to empirically investigate artifacts in context and finally how to present the results of the design cycle as a whole   *Design of Multithreaded Software* Bo I. Sanden,2011-04-06 This book assumes familiarity with threads in a language such as Ada C or Java and introduces the entity life modeling ELM design approach for certain kinds of multithreaded software ELM focuses on reactive systems which continuously interact with the problem environment These reactive systems include embedded systems as well as such interactive systems as cruise controllers and automated teller machines Part I covers two fundamentals program language thread support and state diagramming These are necessary for understanding ELM and are provided primarily for reference Part II covers ELM from different angles Part III positions ELM relative to other design approaches   *The Practice of Enterprise Modeling* Janis Stirna,Anne Persson,2008-11-07 Enterprise modeling EM has gained substantial popularity both in the academic community and among practitioners A variety of EM methods approaches and tools are developed and offered on the market In practice they are used for various p poses such as business strategy development process restructuring as well as business and IT architecture alignment and governance PoEM 2008 the First IFIP WG 8 1 Working Conference on The Practice of Ent prise Modeling took place in Stockholm Sweden It is the first conference aiming to establish a dedicated forum where the use of EM in practice is addressed by bringing together researchers users and practitioners The goals of PoEM 2008 were to velop a better understanding of the practice of EM to contribute to improved EM practice as well as to share knowledge and experiences The theme of PoEM 2008 was EM in different application contexts e g software development including agile development as well as business development gove ance and change   **Model Driven Engineering Languages and Systems** Andy Schürr,Bran Selic,2009-09-15 The pioneering organizers of the rst UML workshop in Mulhouse France inthe summerof1998couldhardlyhaveanticipatedthat in littleoveradecade theirinitiativewouldblossomintotoday shighlysuccessfulMODELSconference series the premier annual gathering of researchersand practitioners focusing on a very important new technical discipline model based software and system engineering This expansion is of course a direct consequence of the growing signi cance and success of model based methods in practice The conferences have contributed greatly to the heightened interest in the eld attracting much young talent and leading to the gradualemergence of its correspondingscienti c and engineering foundations The proceedings from the MODELS conferences are one of the primary references for anyone interested in a more substantive study of the domain The 12th conference took place in Denver in the USA October 4 9 2009 along with numerous satellite workshops and tutorials as well as several other related scienti c gatherings The conference was exceptionally fortunate to have three eminent invited keynote speakers from industry

Stephen Mellor Larry Constantine and Grady Booch **New Trends in Software Methodologies, Tools and Techniques** Hamido Fujita,Mohamed Mejri,2006 Software is the essential enabler for the new economy and science It creates new markets and new directions for a more reliable flexible and robust society It empowers the exploration of our world in ever more depth However software often falls short behind our expectations Current software methodologies tools and techniques remain expensive and not yet reliable for a highly changeable and evolutionary market Many approaches have been proven only as case by case oriented methods This book presents a number of new trends and theories in the direction in which we believe software science and engineering may develop to transform the role of software and science in tomorrow s information society This publication is an attempt to capture the essence of a new state of art in software science and its supporting technology It also aims at identifying the challenges such a technology has to master *Conceptual Modeling of Information Systems* Antoni Olivé,2007-08-15 It is now more than fifty years since the first paper on formal specifications of an information system was published by Young and Kent Even if the term conceptual model was not used at that time the basic intention of the abstract specification was to a large extent the same as for developing conceptual models today to arrive at a precise abstract and hardware dependent model of the informational and time characteristics of a data processing problem The abstract notation should enable the analyst to ganize the problem around any piece of hardware In other words the p pose of an abstract specification was for it to be used as an invariant basis for designing different alternative implementations perhaps even using different hardware components Research and practice of abstract modeling of information systems has since the late fifties progressed through many milestones and achie ments In the sixties pioneering work was carried out by the CODASYL Development committee who in 1962 presented the Information Al bra At about the same time B rje Langefors published his elementary message and e file approach to specification of information systems The next decade the seventies was characterized by the introduction of a large number of new types of as they were called data models We saw the birth of for instance Binary Data Models Entity Relationship Models Relational Data Models Semantic Data Models and Temporal Deductive Models **The Evolution of Conceptual Modeling** Roland Kaschek,Lois M.L. Delcambre,2011-02-04 Conceptual modeling represents a recent approach to creating knowledge It has emerged in response to the computer revolution which started in the middle of the 20th century Computers in the meantime have become a major knowledge media Conceptual modeling provides an answer to the difficulties experienced throughout the development of computer applications and aims at creating effective reasonably priced and sharable knowledge about using computers in business Moreover it has become evident that conceptual modeling has the potential to exceed the boundaries of business and computer usage This state of the art survey originates from the International Seminar on the Evolution of Conceptual Modeling held in Dagstuhl Castle Germany in April 2008 The major objective of this seminar was to look into conceptual modeling from a historical perspective with a view towards the future of conceptual modeling and to achieve a better

understanding of conceptual modeling issues in several different domains of discourse going beyond individual modeling projects The book contains 14 chapters These were carefully selected during two rounds of reviewing and improvement from 26 presentations at the seminar and are preceded by a detailed preface providing general insights into the field of conceptual modeling that are not necessarily discussed in any of the chapters but nevertheless aid in conceptualizing the inner structure and coherence of the field The chapters are grouped into the following three thematic sections the evolution of conceptual modeling techniques the extension of conceptual modeling to a service oriented peer to peer or Web context and new directions for conceptual modeling   *Computer and Information Science* Roger Lee,2013-05-17 This edited book presents scientific results of the 12th IEEE ACIS International Conference on Computer and Information Science ICIS 2013 which was held on June 16 20 2013 in Toki Messe Niigata Japan The aim of this conference was to bring together scientists engineers computer users and students to share their experiences and exchange new ideas research results about all aspects theory applications and tools of computer and information science and to discuss the practical challenges encountered along the way and the solutions adopted to solve them The conference organizers selected the best 20 papers from those papers accepted for presentation at the conference The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review   **Advanced Information Systems Engineering** Jolita Ralyté,Xavier Franch,Sjaak Brinkkemper,Stanislaw Wrycza,2012-07-16 This book constitutes the refereed proceedings of the 24th International Conference on Advanced Information Systems Engineering CAiSE 2012 held in Gdansk Poland in June 2012 The 42 revised full papers 2 full length invited papers and 4 short tutorial papers were carefully reviewed and selected from 297 submissions The contributions have been grouped into the following topical sections business process model analysis service and component composition language and models system variants and configuration process mining ontologies requirements and goal models compliance monitoring and prediction services case studies business process design feature models and product lines and human factors   Human Factors of a Global Society Tadeusz Marek,Waldemar Karwowski,Marek Frankowicz,Jussi Kantola,Pavel Zgaga,2014-06-02 During the last 60 years the discipline of human factors HF has evolved alongside progress in engineering technology and business Contemporary HF is clearly shifting towards addressing the human centered design paradigm for much larger and complex societal systems the effectiveness of which is affected by recent advances in engineering scien   **Software Architecture** Muhammad Ali Babar,Ian Gorton,2010-08-27 Welcome to the European Conference on Software Architecture ECSA which is the premier European software engineering conference ECSA provides researchers and practitioners with a platform to present and discuss the most recent innovative and significant findings and experiences in the field of software architecture research and practice The fourth edition of ECSA was built upon a history of a successful series of European workshops on software architecture held from 2004 through 2006 and a series of European software architecture conferences from 2007 through 2009 The last ECSA was merged with

the 8th Working IEEE IFIP Conference on Software Architecture WICSA Apart from the traditional technical program consisting of keynote talks a main search track and a poster session the scope of the ECSA 2010 was broadened to incorporate other tracks such as an industry track doctoral symposium track and a tool demonstration track In addition we also offered several workshops and tutorials on diverse topics related to software architecture We received more than 100 submissions in the three main categories full research and experience papers emerging research papers and research challenges papers The conference attracted papers co authored by researchers practitioners and academics from 30 countries Algeria Australia Austria Belgium Brazil Canada Chile China Colombia Czech Republic Denmark Finland France Germany Hong Kong I land India Ireland Israel Italy The Netherlands Poland Portugal Romania Spain Sweden Switzerland Tunisia United Kingdom United States   Come, Let's Play David Harel,Rami Marelly,2012-12-06 This book does not tell a story Instead it is about stories Or rather in technical terms it is about scenarios Scenarios of system behavior It con centrates on reactive systems be they software or hardware or combined computer embedded systems including distributed and real time systems We propose a different way to program such systems centered on inter object scenario based behavior The book describes a language two tech niques and a supporting tool The language is a rather broad extension of live sequence charts LSCs the original version of which was proposed in 1998 by W Damm and the first listed author of this book The first of the two techniques called play in is a convenient way to play in scenario based behavior directly from the system s graphical user interface QUI The second technique play out makes it possible to execute or play out the behavior on the QUI as if it were programmed in a conventional intra object state based fashion All this is implemented in full in our tool the Play Engine The book can be viewed as offering improvements in some ofthe phases of known system development life cycles e g requirements capture and anal ysis prototyping and testing However there is a more radical way to view the book namely as proposing an alternative way to program reactivity which being based on inter object scenarios is a lot closer to how people think about systems and their behavior   Process Support and Knowledge Representation in Health Care David Riano,Richard Lenz,Silvia Miksch,Mor Peleg,Manfred Reichert,Annette ten Teije,2013-11-29 This book constitutes the thoroughly refereed papers from the BPM 2013 Joint Workshop on Process Oriented Information Systems and Knowledge Representation in Health Care KR4HC 2013 ProHealth 2013 held in Murcia Spain in June 2013 The 10 revised full papers presented together with 1 keynote paper were carefully reviewed and selected from 19 submissions The papers are organized in topical sections on semantic interoperability in health care modeling clinical guidelines knowledge based techniques for handling clinical data and context aware services and guidance
