Designing With Plastics Gunter Erhard:

Designing with Plastics Gunter Erhard, 2013-03-18 Designing with Plastics is an indispensable tool for every engineer and designer working with plastic materials. It will assist in the development of plastic parts that are not only functional and esthetically pleasing but also manufacturable while meeting ever increasing end use requirements. The short but concise introduction into the specific properties of this material class focuses on the practical needs of the designer and lays the foundation for the following in depth discussion of part design suitable for production and the intended end use application. Numerous detailed examples highlight practical tips and rules of thumb for successful part design. Kunststoffe Stephan Engelsmann, Valerie Spalding, Stefan Peters, 2012-11-05 Kunststoffe sind hochleistungsfähige Werkstoffe, die seit geraumer Zeit Anwendung in der Architektur finden. Sie faszinieren durch vielfältige technische Eigenschaften. Neben diesen macht ein breites Spektrum an Formgebungs- und Bearbeitungsmethoden das Material interessant für komplexe Geometrien in Verbindung mit digitalen Planungsprozessen. Nach den Pionierbauten der 1970er Jahre hat in jüngster Zeit eine Reihe von aufsehenerregenden Bauwerken erneut den Fokus auf das technische und ästhetische Potential von Kunststoffen gelenkt. Bislang fehlte allerdings eine umfassende Darstellung zur Verwendung von Kunststoff in der Architektur. Das vorliegende Buch schließt diese Lücke und bietet eine Einführung in die konstruktiven und gestalterischen Möglichkeiten des Werkstoffs. Es werden nicht nur Kunststoffe und ihre Eigenschaften sondern auch Herstellung, Verarbeitung und Konstruktionsprinzipien beschrieben und für die Architektur relevante Kunststoffprodukte und Halbzeuge vorgestellt. Eine Auswahl von ca. 25 internationalen gebauten Projekten geordnet nach Kunststoffarten und Einsatzgebiet dokumentiert die Anwendungen von Kunststoff in der Architektur. Ein Ausblick erläutert Tendenzen in der Forschung.

Plastics Stephan Engelsmann, Valerie Spalding, Stefan Peters, 2012-11-05 Plastics are high performance materials of wide use in the built environment. Their versatile technical properties are particularly fascinating. A broad range of form giving and finishing processes makes plastic especially interesting for complex geometries in combination with digital planning processes. Following the pioneering plastic structures of the 1970s a number of spectacular buildings have in recent years highlighted the outstanding technical and aesthetic potential of the material. Until now however there has been no systematic treatment of the use of plastic in architecture. This book seeks to fill that gap by providing an introduction to the structural and design possibilities of plastic. It introduces the material and its specific characteristics, describes various types of plastic in terms of their relevance for building, explains processing technologies and presents typical products and components. A concise presentation of twenty five international built projects organized by the type of application and the

Radzevich,2021-06-24 This book presents the most up to date accomplishments in gear design and gear production detailing theory of gearing and its application As an enormous number of gears are used in such sectors as automobiles aerospace machines and similar industries even a very small improvement in the gear design or production for example a 10 cent savings on each gear can result in huge of savings in manufacturing underscoring critical importance of the subject of the book Giving a solid background in theory together with the latest advances in design and production the book is ideal for product designers working in numerous industries The volume also serves as a useful supplement to required texts well for students in mechanical and industrial engineering as it helps establish a scientific foundation to the subject and facilitates a systematic learning process of gear kinematics gear geometry gear design gear production finishing operations and related competencies **Fiber Reinforced Polymers**

Martin Masuelli,2013-01-23 Fiber Reinforced Polymers are by no means new to this world It is only because of our fascination with petrochemical and non petrochemical products that these wonderful materials exist In fact the polymers can be considered and used in the construction and construction repair The petrochemical polymers are of low cost and are used more that natural materials The Fiber Reinforced Polymers research is currently increasing and entails a quickly expanding field due to the vast range of both traditional and special applications in accordance to their characteristics and properties Fiber Reinforced Polymers are related to the improvement of environmental parameters consist of important areas of research demonstrating high potential and particularly great interest as civil construction and concrete repair
