microRNA Regulation in Health and Disease Clifford J. Steer, Subbaya Subramanian, 2020-02-21 MicroRNAs miRNAs are small regulatory RNAs that play a crucial role in posttranscriptional gene regulation Over two thousand miRNAs have been identified in humans and many of them are conserved in other species miRNAs are implicated in fundamental cellular functions including development and disease In the last decade there has been an overwhelming amount of data contributing to the understanding of miRNA biogenesis and their target genes Moreover a significant amount of work has been carried out in developing miRNA biomarkers and therapeutics for various disease conditions RNA based markers and therapeutics have been proven to have a clinical impact and many of these miRNA based therapies are at various stages of human clinical trials and clinical applications Notably miRNAs are also found in exosomes and are considered to impart intercellular communication and function via several different modalities including tunneling nanotubes In spite of our understanding of miRNA biology and function there are many challenges in effectively using miRNAs as biomarkers and therapeutic agents in clinical applications In this Special Issue we are inviting reviews perspectives and original research articles to address some of these challenges Topics will include but are not limited to miRNA biogenesis clinical applications extracellular function biomarkers miRNA immune regulation signaling pathways and preclinical models Gastrointestinal Damage and Metabolic Disorders Daniele Maria-Ferreira, Marcelo Biondaro Gois, Elizabeth S. Fernandes, 2025-08-19 Gastrointestinal GI disorders can be described as physiologic and or morphologic changes in the GI system and include motility disorders changes in mucosal and immune function and alterations in the intestinal microbiota Inflammatory bowel diseases such as ulcerative colitis and Crohn s disease are the most serious disorders causing chronic inflammation while other chronic inflammatory diseases that cause severe damage include irritable bowel syndrome and gastroesophageal reflux The main causes of these diseases include genetic predisposition unhealthy lifestyles pharmacological therapies and infections Regardless of the specific disorder it is known to cause considerable discomfort and a reduced quality of life for those affected and there is increasing evidence that damage to the gastrointestinal tract can influence the development of metabolic diseases For example impaired release of gut hormones responsible for signaling the feeling of satiety could be associated with the occurrence of obesity long term alterations in the composition of the gut microbiota may play a role in the development of metabolic diseases among others Epithelial-Mesenchymal Plasticity in Cancer Metastasis Mohit Kumar Jolly , Toni Celia-Terrassa, 2020-12-29 Recent studies have highlighted that epithelial mesenchymal transition EMT is not only about cell migration and invasion but it can also govern many other important elements such as immunosuppression metabolic reprogramming senescence associated secretory phenotype SASP stem cell properties therapy resistance and tumor microenvironment interactions With the on going debate about the requirement of EMT for cancer metastasis an emerging focus on intermediate states of EMT and its reverse process mesenchymal epithelial transition MET offer new ideas for

metastatic requirements and the dynamics of EMT MET during the entire metastatic cascade Therefore we would like to initiate discussions on viewing EMT and its downstream signaling networks as a fulcrum of cellular plasticity and a facilitator of the adaptive responses of cancer cells to distant organ microenvironments and various therapeutic assaults We hereby invite scientists who have prominently contributed to this field and whose valuable insights have led to the appreciation of epithelial mesenchymal plasticity as a more comprehensive mediator of the adaptive response of cancer cells with huge implications in metastasis drug resistance tumor relapse and patient survival

Mechanisms of Persistence, Survival, and Transmission of Bacterial Foodborne Pathogens in Production Animals Christina L.

Swaggerty,Kenneth J. Genovese,Haiqi He,James Allen Byrd Jr,Michael H. Kogut,2018-08-31 Foodborne illness resulting from food production animals is a global health concern and the Centers for Disease Control estimate that one in six Americans

will become sick with a foodborne illness each year Of course there are numerous causes for these outbreaks but contamination from a food production animal is certainly one source Understanding the host pathogen interaction and how foodborne bacterial pathogens establish a persistent infection and evade host immune responses will be pivotal in reducing the instance of foodborne illness traced back to a food production animal source In this volume we bring together original research and review articles covering some of the key issues surrounding the mechanisms of persistence survival and transmission of bacterial foodborne pathogens in production animals The research focused on poultry and specifically addressed antibiotic resistance Salmonella colonization pathogen reduction strategies using pre or probiotics pathogen evasion and post harvest intervention and pathogen testing The following 11 articles are fine examples of the multidisciplinary approaches that will be required to address and understand the complex interplay between food safety and animal production
