Dimensional Metrology Coordinate Measurements:

Three-dimensional Metrology of Video Coordinate Measuring Machines James Gale Salsbury, 2000 ABSTRACT The three dimensional metrological nature of video coordinate measuring machines is explored The video coordinate measuring machine or video CMM is a variant of the widely used CMM in dimensional metrology The video CMM utilizes a camera based video probe sensor instead of the traditional contact probe sensor Video probes in general do not have true three dimensional measurement capability and therefore many of the metrology techniques and performance tests that are commonly used with contact probe CMMs are not applicable or are not possible using video CMMS Based on underlying metrology principles and on typical implementations a classification scheme is introduced for measurements made with video CMMS The theory behind each class is discussed performance tests are proposed and experimental data are presented The acceptable use of various metrology artifacts is also tested and two novel artifact designs are presented for metrology use on video CMMS The uncertainty in calibrating the actual magnification of the video probe is also investigated The results show a serious need for the development of standardized performance tests and for the better understanding of three dimensional metrology issues by the video CMM community **Coordinate Measuring Machines and Systems** John A.

Recent Advances in Metrology and Fundamental Constants Terry J. Quinn,T. J. Quinn,Sigfrido Leschiutta,P. Tavella,Società italiana di fisica,2001 Over the last decade of the 20th century many improvements took place in the field of metrology and fundamental constants These developments and improvements are discussed in this book The old caesium SI second definition has found a new realization with the fountain approach replacing the classical thermal atomic beam The use of cold atom techniques slowed down and cooled has opened a number of unexpected avenues for metrology and fundamental constants one of these possibilities being the atom interferometry Another development was the demonstration of the possibility of performing a direct frequency division in the visible using short femtosecond pulses Many other developments are also discussed

exposition of Chinese dream which reflects the vision of a better life in the future and the main indicators of social change The book investigates China's development path political system economic structure people's livelihood etc and suggests long term strategies for China in this regard *Journal of Research of the National Institute of Standards and Technology*, 1995 *Dimensions*, 1981 *Precision Metal Additive Manufacturing* Richard Leach, Simone Carmignato, 2020-09-21

Additive manufacturing AM is a fast growing sector with the ability to evoke a revolution in manufacturing due to its almost unlimited design freedom and its capability to produce personalised parts locally and with efficient material use AM companies however still face technological challenges such as limited precision due to shrinkage built in stresses and limited process stability and robustness Moreover often post processing is needed due to high roughness and remaining porosity Qualified trained personnel are also in short supply In recent years there have been dramatic improvements in AM design methods process control post processing material properties and material range However if AM is going to gain a significant market share it must be developed into a true precision manufacturing method The production of precision parts relies on three principles Production is robust i.e. all sensitive parameters can be controlled Production is predictable for example the shrinkage that occurs is acceptable because it can be predicted and compensated in the design Parts are measurable as without metrology accuracy repeatability and quality assurance cannot be known AM of metals is inherently a high energy process with many sensitive and inter related process parameters making it susceptible to thermal distortions defects and process drift The complete modelling of these processes is beyond current computational power and novel methods are needed to practicably predict performance and inform design In addition metal AM produces highly textured surfaces and complex surface features that stretch the limits of contemporary metrology With so many factors to consider there is a significant shortage of background material on how to inject precision into AM processes Shortage in such material is an important barrier for a wider uptake of advanced manufacturing technologies and a comprehensive book is thus needed This book aims to inform the reader how to improve the precision of metal AM processes by tackling the three principles of robustness predictability and metrology and by developing computer aided engineering methods that empower rather than limit AM design Richard Leach is a professor in metrology at the University of Nottingham and heads up the Manufacturing Metrology Team Prior to this position he was at the National Physical Laboratory from 1990 to 2014 His primary love is instrument building from concept to final installation and his current interests are the dimensional measurement of precision and additive manufactured structures His research themes include the measurement of surface topography the development of methods for measuring 3D structures the development of methods for controlling large surfaces to high resolution in industrial applications and the traceability of X ray computed tomography He is a leader of several professional societies and a visiting professor at Loughborough University and the Harbin Institute of Technology Simone Carmignato is a professor in manufacturing engineering at the University of Padua His main research activities are in the areas of precision

manufacturing dimensional metrology and industrial computed tomography He is the author of books and hundreds of scientific papers and he is an active member of leading technical and scientific societies He has been chairman organiser and keynote speaker for several international conferences and received national and international awards including the Taylor Medal from CIRP the International Academy for Production Engineering
