Brake Performance and Wear Test Code Commercial Vehicle Inertia Dynamometer Truck and Bus Foundation Brake Committee, 2000 This SAE Standard provides test procedures for air air hydraulic and hydraulic drum and disc brakes used on highway commercial vehicles over 4536 kg 10 000 lb GVWR *Air Brake Performance and Wear Test Code Commercial Vehicle Inertia Dynamometer* Truck and Bus Foundation Brake Committee, 2006 This SAE Standard provides test procedures for air and air over hydraulic disc or drum brakes used for on highway commercial vehicles over 4536 kg 10 000 lb of GVWR This recommended practice includes the pass fail criteria of Standard No 121 This revision of the SAE J2115 includes several enhancements and fine tuning relative to the previous version The main objectives for the revision were to bring it closer to the FMVSS 121 dynamometer test focus on air brake systems and to update the wear sections to reflect current industry practices for durability testing This revision limits the scope to air braked vehicle applications only There are provisions for disc and drum brakes The test conditions include parameters and response characteristics for the servo controller on the inertia dynamometer The test setup provides an alternate method for measuring drum or disc bulk temperature using a 9 thermocouple array Wear sections reflect better current industry practice for assessing wear characteristics versus temperature The wear sections include intermediate effectiveness evaluation at the corresponding temperature step as well as a baseline temperature of 100 C These effectiveness sections help assess any changes or trends on brake output as an effect of the material wear and the temperature history during previous sections Temperature steps are better harmonized with International Standards for disc brakes Lastly Appendix A indicates the FMVSS 121 performance requirements during the different test sections for air brake systems used on different tractors trailers or other commercial vehicle applications

Bendix disc, brake, pad & shoe data book, 1996 *Inertia Dynamometer Rotor Crack Test Procedure for Air Disc Brakes* Truck and Bus Foundation Brake Committee, 2019 This Recommended Practice applies to commercial vehicles equipped with air disc brakes and above 4536 kg of Gross Vehicle Weight Rating Other assessments on the friction material or rotor related to wear durability correlation to product life noise judder compliance to specific regulations etc are not part of this RP Recommended Practice This revision of the SAE J3080 includes typographical corrections and provides the proper internal references to other sections or items in the document The original rationale from the original release is still applicable Brake rotor cracks on commercial vehicles can compromise the structural integrity of the foundation brake These failures can amount to significant maintenance and downtime costs In order to provide an early assessment of this failure

mode vehicle manufacturers as well as brake suppliers have developed multiple laboratory test procedures. These procedures determine using different test methods and test approaches the propensity of a given friction couple brake rotor and friction material to develop cracks which can render the brakes out of service. It is the objective of this Recommended Practice RP to establish a uniform and industry endorsed laboratory method which reflects the most commonly used inertia dynamometer test procedure. This RP harmonizes the test conditions when applicable and determines the minimum requirements for the test system used to conduct the test. The two methods included on this RP reflect the two main approaches to rotor crack testing. Method A uses a bedding cycle at 200 C and 300 C and incorporates performance torque output versus pressure during the bedding. Method B uses a single bedding cycle at 150 C. This RP also presents the method and criteria to assess and report rotor cracks. This RP applies when comparing test results to a baseline, a product specification or a legacy product design.

Disc Brakes for Heavy Duty Trucks in Japan T. Kajiya, S. Kajiwa, N. Takeda, 1990 Performance Comparison of Drum and Disc Brakes for Heavy Duty Commercial Vehicles E. Goehring, E.-C. von Glasner, 1990 **Compatibility of ABS Disc/drum Brakes on Class VIII Vehicles with Multiple Trailers and Their Effects on Jackknife Stability** Scott Bradley Zagorski, 2003

A current priority of the National Highway Traffic Safety Administration NHTSA is to decrease stopping distances of commercial vehicles. It has been found that longer stopping distances during panic stops increase the chances of collision with other vehicles. By using ABS modulated air disk brakes in conjunction with electronic actuation Electronic Control Braking System ECBS on the prime mover i.e. the tractor the stopping distance can be decreased by as much as 30 %. However due to fiscal reasons in the trucking industry and the nature of ECBS of adding a fourth line to the system it has not been implemented on the trailer s. Thus there are compatibility issues between the tractor and trailer s. Previous brake in turn studies have been done with single trailer commercial vehicles. This study investigated the jackknife stability of double tractor trailer combination vehicles in brake in turn maneuvers with varying loads and surface conditions and brake configurations. TruckSim™ was used to model the vehicle dynamics of the vehicle and MATLAB s Simulink in parallel ran NHTSA s ABS model. A sanity check was performed on TruckSim™ s doubles package with the aid of experimental data obtained by the University of Michigan Transportation Research Institute UMTRI at the Transportation Research Center Inc TRC. In the Brake In Turn studies the tractor utilized a 4s 4m ABS configuration with pneumatic drum pneumatic disc or ECBS disc brakes. The trailers and dolly utilized a 2s 1m select high or low ABS control algorithm with pneumatic drum brakes. Conditions with ABS ON for the entire vehicle and select high control algorithm on the trailers and dolly found that instabilities were exhibited under a surface friction coefficient of 0.3. Lane excursions occurred in the dolly and 2nd trailer or a jackknife occurred between the 1st and 2nd trailer. It was demonstrated that these instabilities could be avoided while utilizing a select low control algorithm on the trailers and dolly. Conditions with ABS OFF for the tractor and on for the rest of the vehicle with a select high control algorithm on the trailers and dolly found instabilities under every

condition with the exception of one The instabilities exhibited were either a lane excursion or jackknife The difference between a jackknife and lane excursion situation was realized when investigating the discrepancy in time between steer and drive wheel lock up The greater difference in lock up between the steer and drive wheels on a high friction coefficient resulted in a jackknife situation On a low or medium friction coefficient the smaller time difference in wheel lock up increased the jackknife stability but a lane excursion still occurred A greater number of jackknife situations occurred on a tractor equipped with pneumatic drum brakes for this same reasoning The tradeoff between the vehicle equipped with disc and drum brakes was discussed Simulation results with ABS OFF on the tractor showed that a tractor equipped with disc brakes ECBS or Pneumatic had greater jackknife stability However the vehicle left the intended path at an earlier moment in the maneuver than a tractor equipped with pneumatic drum brakes under the same simulated conditions A comparison showed that the dolly was the least stable unit in the vehicle with the ABS ON conditions whereas with the ABS OFF the tractor was the least stable unit

Dynamometer Effectiveness Characterization Test for Passenger Car and Light Truck Caliper Disc Brake Friction Materials Brake Dynamometer Standards Committee,2002 This SAE Recommended Practice establishes an inertia dynamometer test procedure using an exemplar caliper disc brake to characterize the effectiveness of disc brake friction materials for passenger cars and light duty trucks up to and including 2700 kg 5954 lb GVW SAE J1652 provides a method of characterizing friction material effectiveness on a full disc brake using test conditions that approximate those for U S mandated new vehicle brake tests
