**Renewable Fuel Standard** National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Economic and Environmental Impacts of Increasing Biofuels Production, 2012-01-29 In the United States we have come to depend on plentiful and inexpensive energy to support our economy and lifestyles In recent years many questions have been raised regarding the sustainability of our current pattern of high consumption of nonrenewable energy and its environmental consequences Further because the United States imports about 55 percent of the nation s consumption of crude oil there are additional concerns about the security of supply Hence efforts are being made to find alternatives to our current pathway including greater energy efficiency and use of energy sources that could lower greenhouse gas GHG emissions such as nuclear and renewable sources including solar wind geothermal and biofuels The United States has a long history with biofuels and the nation is on a course charted to achieve a substantial increase in biofuels Renewable Fuel Standard evaluates the economic and environmental consequences of increasing biofuels production as a result of Renewable Fuels Standard as amended by EISA RFS2 The report describes biofuels produced in 2010 and those projected to be produced and consumed by 2022 reviews model projections and other estimates of the relative impact on the prices of land and discusses the potential environmental harm and benefits of biofuels production and the barriers to achieving the RFS2 consumption mandate Policy makers investors leaders in the transportation sector and others with concerns for the environment economy and energy security can rely on the recommendations provided in this report **Intermediate Level Blends of Ethanol in**

**Biomass** Pentti Hakkila, 2012-12-06 An increase in the demand for wood results in improved recovery and less residual biomass in the forests Paradoxically interest in forest residue as a renewable source of raw material seems to be in a reverse ratio to its availability in a certain area Finland and Sweden are probably more dependent on forestry and forest industries than any other developed countries in the world A sufficiency of raw material for integrated forest industries is vital for the national economy of both countries and a great deal of attention is being paid to the long term potential of unutilized biomass left behind in logging operations Furthermore since these countries possess no reserves of fossil fuels and since their per capita consumption of primary energy is exceptionally high they also consider unmerchantable forest biomass a realistic source of indigenous energy A joint Nordic research project on harvesting and utilization of logging residue was carried out in 1969 1976 under the auspices of the Nordic Research Council on Forest Operations This fruitful cooperation soon gave rise to related national projects in Sweden Finland Norway and Denmark stimulating further research and producing practical applications Concurrently particularly after the worldwide energy crisis in 1973 research on all aspects of utilization of forest biomass mushroomed in the United States Canada and the Soviet Union An explosive increase occurred in both the number and diversity of biomass studies      **The Chemical Trade Journal and Chemical Engineer** ,1946
