ABSTRACT : *The need for mega construction projects development for accelerated socio-economic growth is long overdue for developing countries. Some studies have considered stakeholder management and sustainable construction concepts separately without exploring the simultaneous use for mega projects delivery. This paper reviews the two concepts and suggests a process for enhanced sustainable construction delivery. This paper forms part of a broader Ph.D. study on "Development of sustainable stakeholder management framework for construction projects" aimed at improving stakeholder management process and project delivery. A qualitative research method approach was adopted. An extensive literature review on stakeholder management and sustainable construction was conducted using filtering method for four major journals from the institution database. Identified concepts were developed into a conceptual framework and validated using face to face semi-structured interviews involving ten key stakeholders. The findings are that stakeholder management and sustainability concepts are yet to embrace. This paper suggests a seven-step approach for project managers. (1) Embracing stakeholder management and sustainability concepts, (2) identify stakeholder approach and sustainable principle to adopt, (3) identify and classify project stakeholders, (4) engage stakeholders, (5) analyze stakeholders, (6) manage stakeholders and sustainable principle, (7) monitor and support process.*

Keywords: *developing countries; mega projects; stakeholder; stakeholder management; sustainable construction*

I. Introduction

The need for Mega Construction Projects (MCPs) in developing countries is critical for rapid economic growth. Governments, therefore, undertake educational, health, transport infrastructure among others for social and economic interventions. Through these, countries have experienced significant growth. Studies have revealed that the construction industry globally contributes about 5-10% of the gross domestic product (GDP) and 10% employment out of the total working population ^[1]. Ghana has witnessed the rapid development of MCPs in the urban areas, raising the question of sustainable construction (SC). The nature, scale, and complexity of these projects coupled with funding sources have resulted in several individuals, organizations and firms' involvement in the project development ^[2]. It is pertinent to note that these stakeholders relate to projects differently based on their salience to the project; urgency, power, and legitimacy. Newcombe ^[3] suggests stakeholders can be proponents or antagonist which raises the question of their management for positive impact on the project. With the construction industry embracing stakeholder management SM, the ability to successfully manage stakeholders, meeting their needs and satisfaction is a critical success factor. Researchers have suggested a systematic approach to identification, engagement, analysis and monitoring ^[4] though there is no such formal approach ^[5].

Du Plessis ^[6] suggests the need to address the impact of these MCPs in a way that they are socially and environmentally responsible, and further indicates the need to tackle these issues at the project development stages when creating these built environments. MCPs undoubtedly require large-scale natural and artificial resources impacting on the environment hence the need for sustainable construction to be employed. MCPs undertaking in development countries face human, managerial, political and sustainability challenges including Ghana. Though there are studies on stakeholder management process and sustainable construction respectively, there is no research on using SM process to achieve SC and besides for developing countries. This study which is a part of a Ph.D. dissertation on "Development of sustainable stakeholder management framework for construction projects in developing countries" aims at using SM process to enhance sustainable construction. Fundamental Theories of Mega Infrastructure Construction Management Zhaohan Sheng, 2017-10-20 Fundamental Theories of Mega Infrastructure Construction Management Theoretical Considerations from Chinese Practices is a collection

of decades of research and applications of managing megaprojects using theories of complex systems and management sciences It presents basic classical theory of megaproject management and is a showcase of more than 30 years of research of complex system and management sciences on the theory of megaproject management resulting from the integrating of theory and practice of megaprojects The theory and models have undergone rigorous systematic testing during the management and implementation of megaprojects in China Megaprojects are huge undertakings often in infrastructure bridges tunnels airports etc that involve huge levels of investment often take years to complete and typically run into delays cost overruns and any number of unforeseen problems Over the last few decades no one country has undertaken more of these projects than China and this book presents the fundamental theories underlying the practice of Mega Infrastructure Construction Management as practiced in China Individual chapters provide a basic definition of Mega Infrastructure Construction and its management an overview of the theories behind it the Formation Path basic concepts fundamental principles scientific problems the Method System of Meta synthesis specialized methods in research and intelligent management of Mega Infrastructure Construction Although the theoretical construction management problems in this book are derived from construction practices in China they can be applied universally and extended for great fundamental significance

Sustainability and Megaproject Development Franca Cantoni, Edoardo Favari, 2022-07-08 Megaprojects also referred to in the literature as Large Engineering Projects or Major Projects are generally defined as large scale investment initiatives worth 1b or more and facing similar problems independent of the country where they are implemented and the industry they belong to The common feature of most megaprojects is that they are difficult to design and manage so that their realization and completion is always extremely expensive often over budget and delivery deadlines also are not met In the worst case scenario they remain unfinished This book through its multidisciplinary approach offers food for thought and alternative interpretations for the complex world of megaprojects While much research has been conducted and differing approaches have been developed over the last 20 years there is still a lot of debate surrounding the topic and a holistic approach for effectively managing these initiatives is still missing What is clear to all researchers and experts in the field is that a traditional linear management approach is simply not sufficient as at many stages of a megaproject iterative and feedback effect occurs due to stakeholder involvement and increasing and continuous interaction between them The book promotes the debate among all categories of stakeholders involved in the megaproject's supply chain in order to increase the awareness of complex phenomena relating to the critical issues and common problems they face all over the world and to seek performance improvement across the whole life cycle of a megaproject including the selection design construction operation and de commissioning The multidisciplinary approach cultivated in the book conveys an innovative way to study megaprojects and their inherent complexities

Megaproject Leaders Nathalie Drouin, Alfons van Marrewijk, Ralf Müller, 2021-02-26 Megaproject Leaders brings together 18 prominent academics who interviewed 16 great megaproject

leaders originating from 10 different countries Based on a reflective methodological approach these chapters investigate the managing of megaprojects from a human perspective identify new trends in the managing of megaprojects and identify lessons learned from the personal views of the interviewees The novel ideas presented will appeal to academics practitioners and university students

Megaproject Management Edoardo Favari,Franca Cantoni,2020-05-20 The book investigates the various aspects characterizing Megaprojects from numerous perspectives and by integrating different disciplines engineering economics business organization human resource management law etc It represents the first output of MeRIT the Megaproject Research Interdisciplinary Team and focuses on the intrinsic and unavoidable complexity of Megaprojects The chapters have intentionally not been standardized and humanistic topics are not separated from technical ones this way of reading and interpreting Megaprojects through the cross pollination of various disciplines reflects the MeRIT approach Addressing the complexity involved in Megaprojects requires the use of a hermeneutic circle of sorts understanding the project as a whole is achieved by referring to the specific parts while each part can only be understood in relation to the whole This circular approach appears to be the only one applicable to Megaprojects no final destination no final synthesis can be achieved This volume consists of eight chapters written by researchers in law economics sociology business organization engineering architecture and landscaping The topics covered will be relevant to researchers practitioners involved in the development of Megaprojects and policymakers at the EU level

Narratives in Megaprojects Natalya Sergeeva,Johan Ninan,2023-03-15 This book is a novel contribution to a field dominated by conventional approaches to project management it is about narratives in megaprojects Among the questions examined in this original new book are What are narratives Why are they important in megaprojects How are they formed and used in megaprojects How do promoters of and protestors against megaprojects craft narratives to their advantage What strategies can project managers employ to effectively use narratives in megaprojects Built from longitudinal research studies in combination with internationally recognised teaching materials this book will provide readers with a theoretical understanding of narratives and projects as well as practical international case studies including HS2 the Dakota Access Pipeline the Eden Project and Thames Tideway to support their understanding The authors explain the different types of narrative and how and why they are important in general and in relation to a megaproject and its lifecycle but also explore how to craft narratives in different situations and how they are changed and maintained over a project s lifecycle Narratives in Megaprojects doubles as a text supporting more advanced courses on project management or aspects thereof and as a reflection of the state of the art in this particular perspective on megaprojects It is essential reading for all students and professionals in project management construction and infrastructure as well as executive leaders involved in megaprojects and infrastructure delivery
