Produced Water Kenneth Lee, Jerry Neff, 2011-09-18 A state of the art review of scientific knowledge on the environmental risk of ocean discharge of produced water and advances in mitigation technologies In offshore oil and gas operations produced water the water produced with oil or gas from a well accounts for the largest waste stream in terms of volume discharged Its discharge is continuous during oil and gas production and typically increases in volume over the lifetime of an offshore production platform Produced water discharge as waste into the ocean has become an environmental concern because of its potential contaminant content Environmental risk assessments of ocean discharge of produced water have yielded different results For example several laboratory and field studies have shown that significant acute toxic effects cannot be detected beyond the point of discharge due to rapid dilution in the receiving waters However there is some preliminary evidence of chronic sub lethal impacts in biota associated with the discharge of produced water from oil and gas fields within the North Sea As the composition and concentration of potential produced water contaminants may vary from one geologic formation to another this conference also highlights the results of recent studies in Atlantic Canada

Urban Groundwater Management

and Sustainability John H. Tellam, Michael O. Rivett, Rauf G. Israfilov, 2007-01-07 Given that around 50% of the world's population live in cities and that urban populations are expanding rapidly the issues are important and becoming increasingly urgent To reduce the effects of such impacts management is required irrespective of whether the groundwater is to be used or not This management must be based on a sound technical understanding of the interacting processes involved The forty papers in this volume explore the state of this understanding in the context of a wide range of countries and therefore cultures climates and geologies They are divided into topic areas covering flow chemical water quality biological water quality remediation engineering and socio economics An initial section sets the scene with a range of integrated regional scale studies The volume provides an insight into groundwater issues for other urban specialists including planners without communication between the disciplines involved progress towards acceptable urban sustainability will be slow
