Proteomics of Microbial Human Pathogens Nelson C. Soares,Jonathan M. Blackburn,German Bou,2017-01-17 According to the World Health Organization WHO in 2012 infectious diseases and related conditions account for more than 70% of premature deaths across 22 African countries and estimated 450 000 people worldwide developed multi drug resistant tuberculosis This alarming situation of great public health concern calls for the urgent development of novel and efficient responding strategies The employment of important research platforms such as genomics and proteomics has contributed significant insight into the mechanisms underlying microbial infection and microbe host interaction In this Frontiers Research Topic we aim to produce a timely and pertinent discussion regarding the current status of Proteomics of microbial Human pathogens and the role of proteomics in combating the challenges posed by microbial infection and indeed acquired anti microbial resistance As the field of proteomics progressed from 2 DE gel based approaches to modern LC MS MS based workflows remarkable advances have been reported in terms of data quantity and quality Given the immediate and enormous advantages that high resolution and accurate mass spectrometers have brought to the field proteomics has now evolved into a robust platform capable of generating large amounts of comprehensive data comparable to that reported previously in genomics studies For example detection of the complete yeast proteome has been reported and other small

proteomes such as those of bacteria are within reach Mass spectrometry based proteomics has become an essential tool for biologists and biochemists and is now considered by many as an essential component of modern structural biology Additionally the introduction of high resolution mass spectrometers has driven the development of various different strategies aimed at accurate quantification of absolute and relative amount of proteins of interest Emerging targeted mass spectrometry methodologies such as Selected Reaction Monitoring SRM Parallel Reaction Monitoring PRM and SWATH are perhaps the latest breakthrough within the proteomics community Indeed through a label free approach targeted mass spectrometry offers an unequalled capability to characterize and quantify a specific set of proteins reproducibility in any biological sample Usefully Aebersold and colleagues have recently generated and validated a number of assays to quantify 97% of the 4 012 annotated Mycobacterium tuberculosis Mtb proteins by SRM As such the Mtb Proteome library represents a valuable experimental resource that will undoubtedly bring new insight to the complex life cycle of Mtb Finally as reviewed recently in Frontiers Research Topic mass spectrometry based proteomics has had a tremendous impact on our current understanding of post translational modification PTM in bacteria including the key role of PTMs during interaction of pathogenic bacteria and host interactions We believe that our understanding of microbial Human pathogens has benefited enormously from both 2 DE gel and modern LC MS MS based proteomics It is our wish to produce an integrated discussion surrounding this topic to highlight the existing synergy between these research fields We envisage this Research Topic as a window to expert opinions and perspectives on the realistic practicalities of proteomics as an important tool to address healthcare problems caused by microbial pathogens

Research in Progress ,1978 Artificial Intelligence in Pathogenic Microorganism Research Chen Li,Yu-Dong Yao,Marcin Grzegorzczek,2025-05-26 Infections caused by pathogenic microorganisms including bacteria viruses fungi and other eukaryotic microbes seriously threaten human health Traditional research methods and laboratory techniques have

many limitations and focus more on the identification and classification of pathogenic microorganisms. In recent years, technologies such as whole genome sequencing and advanced bioinformatics analysis have promoted the research of pathogenic microorganisms. However, with the interplay of multiple factors like global climate change, ecological and environmental changes, urbanization, social behavior, and lifestyle changes, pathogenic microorganisms' transmission patterns and impact scope are gradually changing. There is an urgent need for multidimensional technological approaches to achieve epidemiological monitoring and evolutionary direction prediction of pathogenic microorganisms. Additionally, more robust data processing and analysis capabilities are required for rapid identification and diagnosis, monitoring of drug resistance, development of antimicrobial drugs and vaccines, and optimization of treatment plans. Therefore, Artificial Intelligence (AI) has entered our field of vision. In the field of pathogenic microorganisms, AI has shown tremendous potential. In epidemiological research, AI technology can quickly and automatically collect, integrate, and analyze the epidemic data of infectious diseases from different regions so as to predict the trend and scope of disease transmission and track the source of infection. In the process of diagnosis and treatment of infectious diseases, machine learning can not only analyze the microscopic images of pathogens but also analyze the genome sequences of multiple pathogens in a short time and predict their sensitivity or resistance to specific antibiotics, greatly improving the efficiency and accuracy of diagnosis and treatment of infectious diseases. In drug or vaccine development, researchers can use AI models to predict efficient antigens for diseases such as HIV and influenza and thus design more effective vaccine candidates. AI models can also analyze the interactions between drugs, pathogens, and patients in order to design the optimal dosing regimen for each patient. In a word, AI can help human beings better deal with infectious diseases. We welcome original reviews, articles, and other contributions in related fields which mainly include the following aspects: 1. The application of AI in the differential diagnosis of pathogenic microorganisms; 2. The application of AI in the formulation of anti-infection treatment plans; 3. The application of AI in monitoring and predicting the prevalence of pathogenic microorganisms; 4. Application of AI in the prediction and prevention of infectious diseases caused by pathogenic microorganisms; 5. The application of AI in the research and development of anti-infective drugs and vaccines.

Graduate Catalog University of Michigan--Dearborn, 2007 **Detection of Pathogens in Water Using Micro and Nano-Technology** Giampaolo Zuccheri, Nikolaos Asproulis, 2012-08-14. Detection of Pathogens in Water Using Micro and Nano Technology aims to promote the uptake of innovative micro and nano technological approaches towards the development of an integrated cost-effective nano biological sensor useful for security and environmental assays. The book describes the concerted efforts of a large European research project and the achievements of additional leading research groups. The reported knowledge and expertise should support in the innovation and integration of often separated unitary processes. Sampling, cell lysis, and DNA/RNA extraction, DNA hybridisation, detection, micro and nanosensors, microfluidics, together also with computational modelling and risk assessment, can be integrated in the framework of the current and

evolving European regulations and needs The development and uptake of molecular methods is revolutionizing the field of waterborne pathogens detection commonly performed with time consuming cultural methods The molecular detection methods are enabling the development of integrated instruments based on biosensor that will ultimately automate the full pathway of the microbiological analysis of water Editors Giampaolo Zuccheri University of Bologna Italy and Nikolaos Asproulis Cranfield University UK Issues in Animal, Marine, Food, and Industrial Biotechnology: 2013 Edition, 2013-05-01 Issues in Animal Marine Food and Industrial Biotechnology 2013 Edition is a ScholarlyEditions book that delivers timely authoritative and comprehensive information about Marine Biotechnology The editors have built Issues in Animal Marine Food and Industrial Biotechnology 2013 Edition on the vast information databases of ScholarlyNews You can expect the information about Marine Biotechnology in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in Animal Marine Food and Industrial Biotechnology 2013 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> Game Changer-Next Generation Sequencing and Its Impact on Food Microbiology Jennifer Ronholm,Sabah Bidawid,Sandra Torriani,2018-04-26 Advances in next generation sequencing technologies NGS are revolutionizing the field of food microbiology Microbial whole genome sequencing WGS can provide identification characterization and subtyping of pathogens for epidemiological investigations at a level of precision previously not possible This allows for connections and source attribution to be inferred between related isolates that may be overlooked by traditional techniques The archiving and global sharing of genome sequences allow for retrospective analysis of virulence genes antimicrobial resistance markers mobile genetic elements and other novel genes The advent of high throughput 16S rRNA amplicon sequencing in combination with the advantages offered by massively parallel second generation sequencing for metagenomics enable intensive studies on the microbiomes of food products and the impact of foods on the human microbiome These studies may one day lead to the development of reliable culture independent methods for food monitoring and surveillance Similarly RNA seq has provided insights into the transcriptomes and hence the behaviour of bacterial pathogens in food food processing environments and in interaction with the host at a resolution previously not achieved through the use of microarrays and or RT PCR The vast untapped potential applications of NGS along with its rapidly declining costs give this technology the ability to contribute significantly to consumer protection global trade facilitation and increased food safety and security Despite the rapid advances challenges remain How will NGS data be incorporated into our existing global food safety infrastructure How will massive NGS data be stored and shared globally What bioinformatics solutions will be used to analyse and optimise these large data sets This Research Topic
