 destroys those who slip past its defenses The Immune System Third Edition discusses the human body's fundamental defense
 system from its component parts to what happens when the body's defenses are breached Common and uncommon immune
 disorders are also discussed as are potential new therapies to enhance or repair the immune system Packed with full color

 nanotechnology to detect and to treat disease The ability to shape and control matter at the nanoscale presents the
 opportunity to prevent or to cure disease at its source at the level of molecular interactions By delivering nanoparticles into
 cells the molecular pathways and interactions that control cell function can be directly influenced either to restore proper
 balance or to kill rogue cells for example cancer cells However our body's natural defences are constantly monitoring for
 foreign invaders and our immune system readily attacks nanoparticles Thus in pursuing nanotherapeutic treatments we
 engage in biological warfare and the challenge to the nanotechnologist is not only to engineer particles with a specific set of
 physiochemical characteristics but to also avoid the white blood cell sentinels which will destroy or remove the particles In
 this chapter I review the basic principles which control nanoparticle dynamics in solution that is under conditions
 appropriate to the body and highlight the key elements of nanoparticle cell interactions through examination of a naturally
 evolved nanoparticle which is highly efficient in controlling cells the virion or virus particle Nanomedicine , 2013-09-19
