Basics of Precision Engineering Richard Leach, Stuart T. Smith, 2018-04-09 Advances in engineering precision have tracked with technological progress for hundreds of years Over the last few decades precision engineering has been the specific focus of research on an international scale The outcome of this effort has been the establishment of a broad range of engineering principles and techniques that form the foundation of precision design Today s precision manufacturing machines and measuring instruments represent highly specialised processes that combine deterministic engineering with metrology Spanning a broad range of technology applications precision engineering principles frequently bring together scientific ideas drawn from mechanics materials optics electronics control thermo mechanics dynamics and software engineering This book provides a collection of these principles in a single source Each topic is presented at a level suitable for both undergraduate students and precision engineers in the field Also included is a wealth of references and example problems to consolidate ideas and help guide the interested reader to more advanced literature on specific implementations

Networks and Applications Yingshu Li, My T. Thai, 2008-02-10 Wireless sensor networks are being employed in a variety applications ranging from medical to military and from home to industry The principle aim of this book is to provide a reference tool for the increasing number of scientists who depend upon sensor networks in some way The book is organized into several sections each including chapters exploring a specific topic Wireless sensor networks are attracting great attention and there are many research topics yet to be studied In this book the topics covered include network design and modelling network management data management security and applications The articles presented in the book are expository but of a scholarly nature including the appropriate history background a review of the state of the art thinking relative to the topic as well as a discussion of unsolved problems that are of special interest The target readers of this book include the researchers in computer science computer engineering and applied mathematics as well as students in these subjects Specialists as well as general readers will find the articles stimulating and helpful Book Organization The book is organized into five sections Section I introduces the design and modelling of sensor networks Chapter 1 by Iyer Kulkarni Mhatre and Rosenberg presents a taxonomy of wireless sensor networks based on their application level objectives traffic

characteristics and data delivery requirements Popa and Lewis in Chapter 2 describe some algorithms for systematic exploration of unknown environments using a mobile wireless sensor network

Networking And Mobile Computing Xicheng Lu, 2005-07-20 Welcome to Zhangjiajie for the 3rd International Conference on Computer Network and Mobile Computing ICCNMC 2005 We are currently witnessing a proliferation in mobile wireless technologies and applications However these new technologies have ushered in unprecedented challenges for the research community across the range of networking mobile computing network security and wireless web applications and optical network topics ICCNMC 2005 was sponsored by the China Computer Federation in cooperation with the Institute for Electrical and Electronics Engineers IEEE Computer Society The objective of this conference was to address and capture highly innovative and state of the art research and work in the networks and mobile computing industries ICCNMC 2005 allowed sharing of the underlying theories and applications and the establishment of new and long term collaborative channels aimed at developing innovative concepts and solutions geared to future markets The highly positive response to ICCNMC 2001 and ICCNMC 2003 held in Beijing and Shanghai respectively encouraged us to continue this international event In its third year ICCNMC 2005 continued to provide a forum for researchers professionals and industrial practitioners from around the world to report on new advances in computer network and mobile computing as well as to identify issues and directions for research and development in the new era of evolving technologies

Reactor Materials, 1964 *Dynamic Shear Failure of Shallow-buried Flat-roofed Reinforced Concrete Structures Subjected to Blast Loading* T. R. Slawson, 1984 Five box structures with span to depth L/d ratios of 10 1 percent reinforcement in each face and concrete strengths of approximately 4000 and 6000 psi and six box structures with L/d ratios of 7 concrete strength of approximately 7000 psi and steel percentages of 1 2 and 0 75 percent were tested dynamically at depth of burial equal to L/5 The dynamic overpressure simulated the peak overpressure rate of pressure decay and load duration associated with nuclear detonation and was generated using high explosive primacord in a Foam HEST charge cavity configuration placed over the structure at the ground surface Results of these tests indicate that current dynamic shear failure criteria significantly underpredict the dynamic shear strength of these structures Author

Smart Automotive Mobility Gerrit Meixner, 2020-09-16 This book focuses on smart results in the field of smart automotive mobility concentrating on semi autonomous cars The results are based on 5 recently finished public funded research projects with a budget of over 15 million Euro Providing insights into the next generation of personalized mobility on the road the authors discuss personalized adaptive cooperative systems for highly automated cars and how they can be developed in a human centered way Furthermore the book reports on a cooperative driver vehicle interaction How can the driver and the vehicle

support each other What are their best skills and how can they benefit from each other It also gives novel insights on intuitive steering gestures on the steering wheel which initiate maneuvers to be executed by the automation and to be supervised by influenced or interrupted by the driver The book finishes with information on a cooperative laser beam system which improves the communication between the different road participants to optimize the road safety of tomorrow Smart Automotive Mobility Reliable Technology for the Mobile Human is an ideal source for researchers students and practitioners working in the area of intelligent systems for the automotive industry It gives valuable and condensed information from multi million Euro research projects funded by the German Federal Ministry of Education and Research **Pothole Detection**
