Abstract

From the study, results were obtained with the aid of structured questionnaires. A total of 70 questionnaires were administered to the palm oil farmers' producers with the response rate of 95.71%. The data were analysed by the use of descriptive statistics, multiple regression and cost and labour ratio. The results showed revealed that although mechanized palm oil processors were not fully economically efficient in the use of resources, mechanized palm oil processing was still more profitable, relatively. Palm oil processors should therefore adopt good management strategies and practices in order to ensure efficient utilization of existing and available resources.

Introduction

Palm product accounted for about 12.1 % of the Nigeria's total domestic export between 1960 and 1971 (C. 1970) and about 12 % of the foreign exchange earnings up to the beginning of the civil war (Abubakar, 1976). As at 1960, the Nigeria's domestic palm oil production was estimated to be 700,000 metric tonnes while the imports then stood at 170,000 metric tonnes. Palm kernel, a by-product of palm oil is also increasingly produced in large quantities in Nigeria during the same period. Palm kernel output however declined from 115,000 metric tonnes during the period 1960 – 1967 to 105,000 metric tonnes from 1967 – 1969 probably due to poor market rates for the product.

The oil palm is one of the important economic crops in the tropical countries in all. 1962). It is the most important source of oil seed products, more oil per hectare than any of the oil producing crops. The primary products of the oil palm are palm oil (from the mesocarp) and palm kernel oil obtained from the kernel (seed). Palm oil constitutes economic, a percentage of revenue to a high priced energy source which find use for cooking in oil producing countries of Africa. Palm oil and palm kernel oil provide raw materials in the manufacture of soaps and detergents, margarine, candle, confectionery, spirit, resin, bakery, foods, lubricants, pesticides and cosmetics. Other by-product palm kernel cake obtained from the crushing of palm kernel is used as oil. It serves as addition to livestock feed materials.

Palm sector which is dominated from the state governments is very popular and of great socio-economic importance to some parts of Nigeria. The state, as palm sector comprises extensively with that of palm oil. There is no part of oil palm that is not of economic value. The seedlings are used for making charcoal for cooking houses while the shell casings are used for burning, constructing buildings and basket making. The seedlings of the seedlings are used for beavers. The palm oilseeds, a nutritious and the oilseed that serves as a dietary for eating.

The kernel cake, which is left after the seeds have been removed from the palm fruits, is a rich source of proteins. Locally, it is used for making soap. The fibre around the oil has been converted from the fibre provides fuel while the shell from crushed palm nuts provides raw fatty acid. The other sector is an aggregate for flooring houses. The palm wood is used for timber and used in construction of houses, roofing houses and constructing buildings.

Enclaves of Exception Omolade Adunbi, 2022-05-10 How do we measure and

truly grasp the sweeping social and environmental effects of an oil based economy Focusing on the special economic zones resulting from China s trading partnership with Nigeria Enclaves of Exception offers a new approach to exploring the relationship between oil and technologies of extraction and their interrelatedness to local livelihoods and environmental practices In this groundbreaking work Omolade Adunbi argues that even though the exploitation of oil resources is dominated by big corporations it establishes opportunities for many former Nigerian insurgents and their local communities to contest the ownership of such resources in the oil rich Niger Delta and to extract oil themselves and sell it Based on extensive ethnographic fieldwork Enclaves of Exception makes clear that although both the free trade zones and the now booming local artisanal refineries share the goals of profit making and are enthusiastically supported by those benefiting from them economically they have yielded dramatically the same environmental outcome for communities around them that included pollution with precarious effects on the health of the populations in the regions and displacement of population from their livelihood practices

Technical efficiency of smallholder farms in Nigeria Kolawole Ogundari,2010-07-30 This dissertation is based on three essays with a focus on the technical efficiency of smallholder farms in Nigeria The overall objective of the research is to contribute to the existing literature on the efficiency and productivity of Nigerian agriculture The first essay examined the development and drivers of the average technical efficiency in Nigerian agriculture based on 64 efficiency studies covering 1999 2008 The second essay went on to further identify the trends in crop diversification while examining its impact on the technical efficiency of smallholder farms in Nigeria Last but not least the third essay investigated technical efficiency inputs substitution and their complementary effects using an output distance function while focusing on cassava production in Nigeria The second and third essays are based on unbalanced panel data of 846 observations covering three farming season 2006 07 2008 09 from southwestern Nigeria via the application of the stochastic frontier analysis In summary the research found that average technical efficiency significantly increased over time across the 64 frontier studies in the country Besides the study observed that technical progress characterized food crop production in the country while the mean technical efficiency reported from each of the essays that make up the dissertation showed that there is still room for improvement in Nigerian food crop production as each estimate falls below the frontier level Furthermore the research revealed that cropping pattern increased significantly with the intensification of diversification in food crop production in the country In addition the study identifies education credit extension contacts and crop diversification among others as key drivers of technical efficiency in Nigerian food crop production In light of this the research concludes that the latter observation underscores the importance of education credit and extension contacts as variables of policy concern for the institutions of public and private policies design to reposition the Nigerian food crop production industry in order to meet the Millennium Development Goals MDGs of food security
