Microbiología de los alimentos W. C. Frazier, 1972 *XI Congreso Nacional de Microbiología de los Alimentos*, 1998 **300 libros agrícolas en español**, **Microbiología alimentaria. Rosario Pascual Anderson** Calderón Pascual, Vicente, González Hevia, María Ángeles, 2024-10-16

La evolución tecnológica de las últimas décadas constituye la base de esta tercera edición de la obra *Microbiología alimentaria* de Rosario Pascual Anderson. Los métodos clásicos de cultivo han sido actualizados con la introducción de los nuevos medios fluorogénicos y cromogénicos y el estudio de los microorganismos patógenos emergentes. La biología molecular es de aplicación en el análisis de microorganismos en los alimentos. Aunque no es objeto directo de este libro se han tratado en un capítulo las distintas técnicas disponibles hoy día que van desde la más utilizada la Reacción en Cadena de la Polimerasa (PCR) al empleo de sondas oligonucleótidos como la hibridación o los microarrays. Con frecuencia los resultados del laboratorio están disponibles cuando el alimento ya ha sido consumido, por lo que en estos casos las llamadas técnicas rápidas métodos físicos, inmunológicos y biosensores son de gran ayuda en dar una rápida respuesta al peticionario, así como de utilidad en los programas de Análisis de Peligros y Puntos Críticos de Control (HACCP) por ello son objeto de un capítulo específico. La Norma europea EN ISO IEC 17025 recoge los requisitos de acreditación que han de cumplir los laboratorios de ensayo y calibración que incluye a los agroalimentarios. En España la acreditación de laboratorios es competencia de la Entidad Nacional de Acreditación (ENAC). Las Normas Internacionales ISO indicadas en cada capítulo ayudan en el proceso de acreditación. Las autoridades han acometido una profunda renovación normativa por ello hemos concentrado en un solo capítulo la legislación actualmente vigente. Para finalizar se ha incorporado un capítulo relativo a Los límites y criterios microbiológicos de los llamados nuevos alimentos derivados de nuevas fuentes y tecnología de producción: insectos, microalgas, extractos, aceites, etc. Estos productos son evaluados por la Autoridad Europea de Seguridad Alimentaria (EFSA).

Guía Práctica de microbiología en agua y alimentos Pablo Santiago Baggini, 2020-09-19

El agua que se consume así como el alimento que se elabora y se consume son una responsabilidad de todos los integrantes de la cadena llamada de la Inocuidad o la Seguridad Alimentaria abarcando desde el productor de la materia prima al consumidor. La propuesta es brindar la herramienta del conocimiento y los fundamentos necesarios para comprender cuáles son los escalones en esa empinada escalera de la seguridad en los alimentos: conocer al patógeno y aislarlo para comprender la morbilidad que causa.

Los objetivos de este taller fueron discutir y dar a conocer las diferentes tecnologías utilizadas en el procesamiento y en la utilización de los desechos de la pesca, de los mataderos y procesamiento de productos animales y de los desperdicios alimenticios con fines a usarlos en la alimentación.
