

Why Is an Demand Curve Downward-Sloping?

To see why the law of demand is obvious, economists say about it a little differently than in a typical class. Economists go beyond describing the conditions around individual consumers to look at consumers with a demand curve in demand-sloping, or negatively sloped, aggregate form as the demand curve of the aggregate market.

Individual utility and quantity of goods used increase as price decreases, but the magnitude of the price drop is not equal to the increase in utility or willingness to pay to acquire the item. The magnitude of the price drop is smaller than consumers' willingness to pay because, in the aggregate market of goods, the rise in willingness to pay for one good is not at the same time the price of another. When price decreases, we are not sure a higher willingness to pay for one good is offset by a lower willingness to pay for another good. The slope of a good's demand curve, therefore, will be the aggregate utility of an individual good.

Read It

Figure 11.1 presents the law of demand, which states that the quantity of goods demanded falls as the price of the good falls.

- Use the data to compare the marginal utility of each good and each week. The problem is that Figure 11.1 represents the market, not the individual's willingness to pay for the good, which each week.

Figure 11.1

Marginal Utility of Each Market Good

Number of Good 1 Units	Total Utility	Marginal Utility	Number of Good 2 Units	Total Utility	Marginal Utility
0	0	0	0	0	0
1	50	50	1	40	40
2	70	20	2	60	20
3	80	10	3	70	10
4	85	5	4	75	5
5	88	3	5	78	3
6	90	2	6	80	2
7	91	1	7	81	1

- Using Figure 11.1, use the law of diminishing marginal utility to explain why the marginal utility of each good falls as the quantity of each good increases.
