Microstrip Patch Antenna Learning using MATLAB. Theory and Implementation Jagadish Jadhav, Alkesh Kumar M Khatri, Pramod J Deore, 2021-07-30 Scientific Study from the year 2021 in the subject Engineering Communication Technology course M Tech language English abstract Microstrip patch antenna is used to send onboard parameters of article to the ground while under operating conditions By the study of this book we find out how to investigate a new method of teaching microstrip patch antenna design for undergraduate students by using MATLAB Effect of changes in basic parameter microstrip patch antenna on its radiation pattern and other parameters to study the effect of resonant frequency and substrate parameters like relative dielectric constant substrate thickness on the radiation parameters of bandwidth and physical dimension of the microstrip patch antenna can be determined by using GUI In this book we develop simple CAD GUI formulas that describe the basic properties of microstrip patch antenna using MATLAB By the usage of this teaching tool we can analyze the behaviour of the microstrip patch antenna and design of it for different material Satellite communication and wireless communication has been developed rapidly in the past decades and it has already a dramatic impact on human life In the last few years the development of wireless local area networks WLAN represented one of the principal interests in the information and communication field Thus the current trend in commercial and government communication systems has

been to develop low cost minimal weight low profile antennas that are capable of maintaining high performance over a large spectrum of frequencies This technological trend has focused much effort into the design of microstrip patch antennas The variety in design that is possible with microstrip antenna probably exceeds that of any other type of antenna element In addition once the shape and operating mode of the patch are selected designs become very versatile in terms of operating frequency polarization pattern and impedance They are extremely low profile lightweight simple and inexpensive to fabricate using modern day printed circuit board technology compatible with microwave and millimeter wave integrated circuits MMIC and have the ability to conform to planar and non planar surfaces Microstrip Patch Antenna Design Bhunia

Sunandan,2014-01 Besides lot of advantages of Microstrip Patch Antenna some severe limitations like narrow bandwidth low power output low gain hindered it to use in some application specially where wideband high gain high power is essential In modern days researchers are concentrated to overcome these limitations The design of dual or multi frequency patch antennas are also very much important because any one can use a single antenna instead of two or more antenna operating in the single frequency Compact microstrip patch antenna design is also important in modern days as the area is a major constrained in the MMIC design In this book new and novel approaches to design dual multi frequency compact and broadband microstrip patch antennas are discussed which are very new and published in different international journals by the author This book constitutes of eight chapters among which first three chapters are about the basic concept and the last one is for major findings and future scope of work for the young researchers Other four chapters are for novel approaches for designing different types of microstrip patch antennas Microstrip Antenna Design K.
