Marion,2018-10-15 From the 1920s Afghanistan maintained a small air arm that depended heavily upon outside assistance Starting in 2005 the United States led an air advisory campaign to rebuild the Afghan Air Force AAF In 2007 a formal joint combined entity led by a U S Air Force brigadier general began air advisor work with Afghan airmen Between 2007 and 2011 these efforts made modest progress in terms of infrastructures personnel and aircraft accessions and various training courses But by 2010 advisors increasingly viewed AAF command and control C2 as a problem area that required significant improvement if a professional air force was to be built In the spring of 2011 major institutional changes to AAF C2 procedures were being introduced when nine U S air advisors were killed The attack was the worst single incident loss of U S Air Force personnel in a deployed location since 1996 and the worst insider attack since 2001 From the day of that tragic event the cultural chasm between Afghanistan and the West became more apparent This dilemma continues with no end in sight to an air advisory mission of uncertain long term value Fighter Aircraft Since, 1945 Frank Schwede,2017-11-30 The world s first jet engines were already available shortly before the end of the Second World War but they had not been developed to a high enough standard to take part This changed after 1945 when on both sides of the Iron Curtain one technological development surpassed the others and records tumbled almost every week The era of the piston engine was finally over and jet fighters now dominated the skies By the mid 1950s their speed had already reached double that of the speed of sound an achievement which a few years earlier would have sounded to many like science fiction
