Scarcity and Growth Revisited R. David Simpson, Michael A. Toman, Robert U. Ayres, 2012-05-23 In this volume a group of distinguished international scholars provides a fresh investigation of the most fundamental issues involved in our dependence on natural resources In *Scarcity and Growth* RFF 1963 and *Scarcity and Growth Reconsidered* RFF 1979 researchers considered the long term implications of resource scarcity for economic growth and human well being *Scarcity and Growth Revisited* examines these implications with 25 years of new learning and experience It finds that concerns about resource scarcity have changed in essential ways In contrast with the earlier preoccupation with the adequacy of fuel mineral and agricultural resources and the efficiency by which they are allocated the greatest concern today is about the Earth's limited capacity to handle the environmental consequences of resource extraction and use Opinion among scholars is divided on the ability of technological innovation to ameliorate this new scarcity However even the book's more optimistic authors agree that the problems will not be successfully overcome without significant advances in the legal financial and other social institutions that protect the environment and support technical innovation *Scarcity and Growth Revisited* incorporates expert perspectives from the physical and life sciences as well as economics It includes issues confronting the developing world as well as industrialized societies The book begins with a review of the debate about scarcity and economic growth and a review of current assessments of natural resource availability and consumption The twelve chapters that follow provide an accessible lively and authoritative update to an enduring but changing debate

Industrial Innovation in China Zhenyu Fu, 2021-09-30 This book based on extensive original research examines the factors which lead to successful innovation in Chinese industry Considering the large and important Chinese mining industry in detail it argues that innovation is key for success in all industries not just new tech industries It reveals how the interaction of universities governments and industries is highly significant considers how some parts of the industry such as the mining and mineral processing stages are more innovative than other stages such as

prospecting and mining equipment manufacturing and suggests that this is explained both by the distance between final products and the market and commercialisation and by the intensity of the interaction between the industrial company and the university or research institute Throughout the book includes examples and case studies to highlight the points made
