Applied Meta-Analysis with R Ding-Geng (Din) Chen, Karl E. Peace, 2013-05-03 In biostatistical research and courses practitioners and students often lack a thorough understanding of how to apply statistical methods to synthesize biomedical and clinical trial data Filling this knowledge gap Applied Meta Analysis with R shows how to implement statistical meta

analysis methods to real data using R Drawing on their extensive research and teaching experiences the authors provide detailed step by step explanations of the implementation of meta analysis methods using R Each chapter gives examples of real studies compiled from the literature After presenting the data and necessary background for understanding the applications various methods for analyzing meta data are introduced The authors then develop analysis code using the appropriate R packages and functions This systematic approach helps readers thoroughly understand the analysis methods and R implementation enabling them to use R and the methods to analyze their own meta data Suitable as a graduate level text for a meta data analysis course the book is also a valuable reference for practitioners and biostatisticians even those with little or no experience in using R in public health medical research governmental agencies and the pharmaceutical industry

Biosimilars Shein-Chung Chow,2013-07-29 As many biological products face losing their patents in the next decade the pharmaceutical industry needs an abbreviated regulatory pathway for approval of biosimilar drug products which are cost effective follow on subsequent versions of the innovator s biologic products But scientific challenges remain due to the complexity of both the manuf

Dose Finding by the Continual Reassessment Method Ying Kuen Cheung,2011-03-29 As clinicians begin to realize the important role of dose finding in the drug development process there is an increasing openness to novel methods proposed in the past two decades In particular the Continual Reassessment Method CRM and its variations have drawn much attention in the medical community though it has yet to become a commonplace tool To overcome the status quo in phase I clinical trials statisticians must be able to design trials using the CRM in a timely and reproducible manner A self contained theoretical framework of the CRM for researchers and graduate students who set out to learn and do research in the CRM and dose finding methods in general Dose Finding by the Continual Reassessment Method features Real clinical trial examples that illustrate the methods and techniques throughout the book Detailed calibration techniques that enable biostatisticians to design a CRM in timely manner Limitations of the CRM are outlined to aid in correct use of method This book supplies practical efficient dose finding methods based on cutting edge statistical research More than just a cookbook it provides full unified coverage of the CRM in addition to step by step guidelines to automation and parameterization of the methods used on a regular basis A detailed exposition of the calibration of the CRM for applied statisticians working with

dose finding in phase I trials the book focuses on the R package dfcrm for the CRM and its major variants The author recognizes clinicians skepticism of model based designs and addresses their concerns that the time professional and computational resources necessary for accurate model based designs can be major bottlenecks to the widespread use of appropriate dose finding methods in phase I practice The theoretically and empirically based methods in Dose Finding by the Continual Reassessment Method will lessen the statistician's burden and encourage the continuing development and implementation of model based dose finding methods
