McCabe,2010-07-26

Traditionally networking has had little or no basis in analysis or architectural development with designers relying on technologies they are most familiar with or being influenced by vendors or consultants. However, the landscape of networking has changed so that network services have now become one of the most important factors to the success of many third generation networks. It has become an important feature of the designer's job to define the problems that exist in his network, choose and analyze several optimization parameters during the analysis process, and then prioritize and evaluate these parameters in the architecture and design of the system. Network Analysis Architecture and Design Third Edition uses a systems methodology approach to teaching these concepts which views the network and the environment it impacts as part of the larger system, looking at interactions and dependencies between the network and its users, applications, and devices. This approach matches the new business climate where customers drive the development of new services, and the book discusses how networks can be architected and designed to provide many different types of services to customers. With a number of examples, analogies, instructor tips, and exercises, this book works through the processes of analysis, architecture, and design step by step, giving designers a solid resource for making good design decisions. With examples, guidelines, and general principles, McCabe illuminates how a network begins as a concept, is built with addressing, protocol, routing, and management, and harmonizes with the interconnected technology around it. Other topics covered in the book are learning to recognize problems in initial design, analyzing optimization parameters, and then prioritizing these parameters and incorporating them into the architecture and design of the system. This is an essential book for any professional that will be designing or working with a network on a routine basis. Substantially updated design content includes ad hoc networks, GMPLS, IPv6, and mobile networking. Written by an expert in the field that has designed several large scale networks for government agencies, universities, and corporations, it incorporates real life ideas and experiences of many expert designers along with case studies and end of chapter exercises.

EUNICE 2005: Networks and Applications Towards a Ubiquitously Connected World Carlos Delgado Kloos, Andrés Marín, David Larrabeiti, 2006-06-07 EUNICE is a network of Universities throughout Europe. The EUNICE network has been created to foster the mobility of students, faculty members, and research scientists working in the field of information and communication technologies and to promote educational and research cooperation between its member institutions. The prime means for implementing these goals is the annual Summer School organized by the member institutions. From its conception, the EUNICE Summer Schools were designed as unique events where the joint participation of PhD students and supervisors working in the field of information and communication technologies (ICT) is the key to create an event that goes far beyond a conventional international workshop. Furthermore, the Summer School is an open forum for the cooperation of the European member institutions and any other organisation interested. European academic research centres at all levels. This cooperation is paramount to successfully construct and participate in the European Higher Education Area and especially to achieve easy and effective exchange of research.
