Bio-Nanotechnology Manashi Bagchi, Hiroyoshi Moriyama, Fereidoon Shahidi, 2012-11-26 Bio nanotechnology is the key functional technology of the 21st century It is a fusion of biology and nanotechnology based on the principles and chemical pathways of living organisms and refers to the

functional applications of biomolecules in nanotechnology It encompasses the study creation and illumination of the connections between structural molecular biology nutrition and nanotechnology since the development of techniques of nanotechnology might be guided by studying the structure and function of the natural nano molecules found in living cells Biology offers a window into the most sophisticated collection of functional nanostructures that exists This book is a comprehensive review of the state of the art in bio nanotechnology with an emphasis on the diverse applications in food and nutrition sciences biomedicine agriculture and other fields It describes in detail the currently available methods and contains numerous references to the primary literature making this the perfect field guide for scientists who want to explore the fascinating world of bio nanotechnology Safety issues regarding these new technologies are examined in detail The book is divided into nine sections an introductory section plus Nanotechnology in nutrition and medicine Nanotechnology health and food technology applications Nanotechnology and other versatile applications Nanomaterial manufacturing Applications of microscopy and magnetic resonance in nanotechnology Applications in enhancing bioavailability and controlling pathogens Safety toxicology and regulatory aspects Future directions of bio nanotechnology The book will be of interest to a diverse range of readers in industry research and academia including biologists biochemists food scientists nutritionists and health professionals

Cereals and Pulses Liangli L. Yu, Rong Tsao, Fereidoon Shahidi, 2012-05-01 Cereal and pulse crops are staple foods that provide essential nutrients to many populations of the world Traditionally whole grains were consumed but most current foods are derived from refined fractions of cereal and pulse crops Consumption of processed or refined products may reduce the health benefits of food In wheat based processed foods for example the removed 40% of the grain mainly the bran and the germ of the wheat grain contains the majority of the health beneficial components These components particularly non essential phytochemicals such as carotenoids polyphenols phytosterols stanols and dietary fibers have been shown to reduce the risk of major chronic diseases of humans such as cancer cardiovascular diseases and Parkinson s disease Such bioactives are therefore good candidates for ingredients of nutraceuticals and functional foods There are many factors that can affect the bioactive content of cereal and pulse based food ingredients including genetics growing and storage conditions post harvest treatments food formulation and processing All of these factors ultimately affect human health and wellness Bioavailability is also important for these compounds for exerting their protective roles

Cereals and Pulses Nutraceutical Properties and Health Benefits provides a summary of current research findings related to phytochemical composition and properties of cereal and pulse crops The nutraceutical properties of each major cereal and pulse are discussed Coverage of cereals and pulse crops includes barley oats rice rye corn adlay wheat buckwheat psyllium sorghum millet common beans field peas faba beans chickpea lentil and soybeans Chapters for each crop discuss methods to improve crop utilization nutraceutical components and properties bioactive compositions antioxidant properties beneficial health effects disease prevention activities and areas for future research Also included are two chapters that examine the beneficial health

properties of dietary fibers and antioxidants Edited and written by an international team of respected researchers this book is a reference guide for scientists working in food ingredients food product research and development functional foods and nutraceuticals crop breeding and genetics human nutrition post harvest treatment and processing of cereal grains and pulses It will enable them to effect value added food innovation for health promotion and disease risk reduction **Manufacturing**
