## **Big History From The Big Bang To The Present:**

**Big History** Cynthia Stokes Brown, 2007 An epic for our time Big History begins when the universe is no more than a single point the size of an atom squeezed together in unimaginable density and ends with a 21st century planet inhabited by 6.1 billion people It is a story that takes in prehistoric geology human evolution the agrarian age the Black Death the voyages of Columbus the industrial revolution and global warming it represents a new kind of history one which skillfully interweaves historical knowledge and cutting edge science Big History from the Big Bang to the Present Cynthia Stokes

Brown, 2024-12-05 Traditional Chinese edition of Big History From the Big Bang to the Present The Late Eocene Earth Christian Koeberl, Alessandro Montanari, 2009 The Late Eocene and the Eocene Oligocene E/O transition mark the most profound oceanographic and climatic changes of the past 50 million years of Earth history with cooling beginning in the middle Eocene and culminating in the major earliest Oligocene Oi 1 isotopic event The Late Eocene is characterized by an accelerated global cooling with a sharp temperature drop near the E/O boundary and significant stepwise floral and faunal turnovers These global climate changes are commonly attributed to the expansion of the Antarctic ice cap following its gradual isolation from other continental masses However multiple extraterrestrial bolide impacts possibly related to a comet shower that lasted more than 2 million years may have played an important role in deteriorating the global climate at that time This book provides an up to date review of what happened on Earth at the end of the Eocene Epoch **Big History,**
