

**Question 1:** When your ball automatically updates your position, there are two ways of representing the information you are storing about the ball's position. Is one more efficient than the other in providing useful motion without redundancy? Or are the methods equivalent? Justify your answer.

1. Is position better? A thing's location is stored because it's easier than velocity to understand speed. Is it less useful than velocity? Does this position allow the location to get this information? Or is velocity more useful as the location's information?

Yes.  $W = F \cdot d$  is (avg. vel.  $\times$  time) or force  $\times$  time.

No.  $W = F \cdot d$  is (avg. vel.  $\times$  time) or force  $\times$  time.

2. When position is stored, you can calculate velocity by  $\Delta x / \Delta t$  and acceleration by  $\Delta v / \Delta t$ . When velocity is stored, you can calculate position by  $\Delta x = v \cdot \Delta t$ . Which is more useful?

$$\Delta x = \frac{1}{2} a t^2 = \frac{1}{2} (a t) t = \frac{1}{2} v t \quad \text{Yes} \quad \text{Correct}$$

3. Is acceleration better or the kg/m/s<sup>2</sup> is better or the kg/m/s<sup>2</sup> is better? Justify your answer. Is the potential energy of the ball better than the ball's kinetic energy? Is the ball's kinetic energy better than the ball's potential energy? Justify your answer.

Yes.  $W = F \cdot d$  is (avg. vel.  $\times$  time) or force  $\times$  time.

No.  $W = F \cdot d$  is (avg. vel.  $\times$  time) or force  $\times$  time.

4. Is the ball's kinetic energy better or the ball's potential energy? Justify your answer. Is the ball's kinetic energy better or the ball's potential energy? Justify your answer. Is the ball's kinetic energy better or the ball's potential energy? Justify your answer.

The ball's kinetic energy is better than the ball's potential energy. Is the ball's kinetic energy better or the ball's potential energy? Justify your answer. Is the ball's kinetic energy better or the ball's potential energy? Justify your answer. Is the ball's kinetic energy better or the ball's potential energy? Justify your answer.

$$\begin{aligned} \Delta x &= \frac{1}{2} a t^2 \\ \Delta x &= \frac{1}{2} (a t) t \\ \Delta x &= \frac{1}{2} v t \end{aligned} \quad \text{Correct}$$

*Elliptic-Hyperbolic Partial Differential Equations* Thomas H. Otway, 2015-07-08 This text is a concise introduction to the partial differential equations which change from elliptic to hyperbolic type across a smooth hypersurface of their domain

These are becoming increasingly important in diverse sub fields of both applied mathematics and engineering for example The heating of fusion plasmas by electromagnetic waves The behaviour of light near a caustic Extremal surfaces in the space of special relativity The formation of rapids transonic and multiphase fluid flow The dynamics of certain models for elastic structures The shape of industrial surfaces such as windshields and airfoils Pathologies of traffic flow Harmonic fields in extended projective space They also arise in models for the early universe for cosmic acceleration and for possible violation of causality in the interiors of certain compact stars Within the past 25 years they have become central to the isometric embedding of Riemannian manifolds and the prescription of Gauss curvature for surfaces topics in pure mathematics which themselves have important applications Elliptic Hyperbolic Partial Differential Equations is derived from a mini course given at the ICMS Workshop on Differential Geometry and Continuum Mechanics held in Edinburgh Scotland in June 2013 The focus on geometry in that meeting is reflected in these notes along with the focus on quasilinear equations In the spirit of the ICMS workshop this course is addressed both to applied mathematicians and to mathematically oriented engineers The emphasis is on very recent applications and methods the majority of which have not previously appeared in book form

*Mechanics and Relativity* Timon Idema, 2018-12-12 In *Mechanics and Relativity* the reader is taken on a tour through time and space Starting from the basic axioms formulated by Newton and Einstein the theory of motion at both the everyday and the highly relativistic level is developed without the need of prior knowledge The relevant mathematics is provided in an appendix The text contains various worked examples and a large number of original problems to help the reader develop an intuition for the physics Applications covered in the book span a wide range of physical phenomena including rocket motion spinning tennis rackets and high energy particle collisions *Mathematical Modelling* Simon Serovajsky, 2021-11-23

*Mathematical Modelling* sets out the general principles of mathematical modelling as a means comprehending the world Within the book the problems of physics engineering chemistry biology medicine economics ecology sociology psychology political science etc are all considered through this uniform lens The author describes different classes of models including lumped and distributed parameter systems deterministic and stochastic models continuous and discrete models static and dynamical systems and more From a mathematical point of view the considered models can be understood as equations and systems of equations of different nature and variational principles In addition to this mathematical features of mathematical models applied control and optimization problems based on mathematical models and identification of mathematical models are also presented Features Each chapter includes four levels a lecture main chapter material an appendix additional information notes explanations technical calculations literature review and tasks for independent work this is suitable for undergraduates and graduate students and does not require the reader to take any prerequisite course but may be useful for researchers as well Described mathematical models are grouped both by areas of application and by the types of obtained mathematical problems which contributes to both the breadth of coverage of the material and the depth of its understanding

Can be used as the main textbook on a mathematical modelling course and is also recommended for special courses on mathematical models for physics chemistry biology economics etc
