Questions:

- Where does the most earthquakes and volcanoes occur on the Earth's surface?
Where tectonic plates meet.

New crust is created at mid ocean ridges, and then subducted at convergent boundaries to be melted. At some point to lava, the material that was melted will change again to new crust.
- How could the movement of tectonic plates create another supercontinent like Pangea?
From the continuous movement of the tectonic plates, the continents will eventually come together again.

As the Earth's core cools, convection currents will slow down and the plates will stop moving which will stop volcanic activity and earthquakes.
- What are the different ways in which the tectonic plates interact with each other as they move around?
The tectonic plates divide, collide and slide as they move around.
