environmental conditions and climate change It is projected that potato yield may decrease up to 32 per cent by 2050 due to increasing temperatures and drought conditions Thus future potato breeding programmes should focus on enhancing abiotic and biotic stress tolerance through the utilization of the natural germplasm conserved in different gene banks along with climate friendly agronomical practices Moreover potato breeding should benefit from the effectiveness and ease of molecular techniques such as marker assisted selection genome wide association studies functional genomics and transgenics The development of new potato varieties can also be achieved via genetic engineering and genome editing Disease free potato seed production requires the integration of tissue culture methods followed by the production of mini tubers under an aeroponic system As it is a staple food for millions and demand for potatoes will increase in the future which makes this crop suitable for future research Hence the present book is formulated for professionals researchers and post graduate students who is working with advanced production breeding and post harvest technologies on potato crop specially in Indian perspective

The Complete Book on Cultivation and Manufacture of Tea (2nd Revised Edition) H.

Panda, 2016-03-08 Tea is one of the most popular beverages that are being consumed all over the world. Tea is known as a soothing drink and a way of life. Owing to its increasing demand, tea is considered to be one of the major components of the world beverage market. Tea is very beneficial for health and is also known for its anticarcinogenic properties. Green tea acts as an antiviral agent. Growing tea requires a sufficient amount of work, and there is an additional level of work that must be incorporated to harvest it. Tea is cultivated in tropical and sub-tropical regions. There are various kinds of tea, such as black tea, green tea, oolong tea, that can be obtained from the real tea plant, *Camellia sinensis*. The making of different varieties of tea mainly depends upon plucking and rolling, spreading, and storing process. The handbook describes aspects of tea cultivation ranging from the history of old crop machinery, equipment for various tea biological control, organic tea, and many more. This is a sincere attempt to open up the world of this wonderful beverage, its cultivation methods, types of tea available worldwide, manufacturing process to the common man. Some of the fundamentals of the book are: growth of tea in other countries, tea in Indian economy, biochemical constituents, pharmacological properties, selection, pollination, and propagation, nutritional requirements, growth, photosynthesis, and respiration, nursery management, water theory, oxidative degradation of protein, biological effect of polyphenols, analysis of tea, tea processing, green tea processing, tea bag production, etc. This book will be a mile stone for its readers who are new to this sector. It will also find useful for entrepreneurs, tea scientists, and tea research establishments.
