**Opening Switches** A.H. Guenther,T. Martin,M. Kristiansen,2012-12-06 Pulsed power technology in the simplest of terms usually concerns the storage of electrical energy over relatively long times and then its rapid release over a comparatively short period However if we leave the definition at that we miss a multitude of aspects that are important in the ultimate application of pulsed power It is in fact the application of pulsed power technology to which this series of texts will be focused Pulsed power in today's broader sense means special power as opposed to the traditional situation of high voltage impulse issues related to the utility industry Since the pulsed power field is primarily application driven it has principally engineering flavor Today's applications span those from materials processing such as metal forming by pulsed magnetic fields to commercial applications such as psychedelic strobe lights or radar modulators Very high peak power applications occur in research for inertial confinement fusion and the Strategic Defense Initiative and other historical defense uses In fact it is from this latter direction that pulsed power has realized explosive growth over the past half century Early thrusts were in electrically powered systems that simulated the environment or effects of nuclear weapons detonation More recently it is being utilized as prime power sources for directed energy weapons such as lasers microwaves particle beam weapons and even mass drivers kinetic energy weapons
