The **Compress/Expand Subtree** tool (see Figure 7.10) allows you to display the CTXM clade as a single subgroup. Click that tool to activate it, then click on the branch leading to the node that is common to the CTXM clade. A dialog box (Figure 7.14) requires you to name the subgroup.

The **Subtree Drawing Options** window then allows you to set a variety of properties, including the color of the subtree triangle. In this case, I named the subgroup CTXM clade. The result is the tree shown in Figure 7.15.

Clicking on the CTXM clade branch again with the **Compress/Expand Subtree** tool reverses the process and restores the original appearance of the tree—except that the clade is enclosed in a bracket and the bracket is labeled with the name you chose. Indeed, that is how I created the bracket in Figure
