

Question:

In a lab experiment, a ball is rolled down a ramp so that it leaves the edge of the table with a horizontal velocity v . If the table has a height h above the ground, how far away from the edge of the table, a distance x , does the ball land? You may neglect air friction in this problem.

- a. $\frac{2v^2}{g}$
- b. $v\sqrt{\frac{2h}{g}}$
- c. $\frac{2vh}{g}$
- d. $\frac{2h}{g}$
- e. none of these

©2009, Richard White. LearnAPphysics.com

Answer:

The correct answer is *b*. The ball takes a time t to fall from the table, as determined here:

$$\Delta y = v_0 t + \frac{1}{2} a t^2$$

$$t = \sqrt{\frac{2\Delta y}{-g}} = \sqrt{\frac{2h}{g}}$$

Horizontally, during that time the ball travels at constant velocity:

$$\Delta x = vt$$

$$x = v\sqrt{\frac{2h}{g}}$$

Physics Kinematics Problems And Solutions:

Physics—Problems, Solutions, and Computer Calculations Wan Muhamad Saridan Wan Hassan, 2023-11-06

Knowledge of and skill in physics are essential foundations for studies in science and engineering. This book offers students an introduction to the basic concepts and principles of physics. It covers various topics specifically related to physical mechanics, the properties of matter and heat. Each chapter begins with a summary of concepts, principles, definitions, and formulae to be discussed, as well as ending with problems and solutions that illustrate the specific topic. Steps are detailed to help build reasoning and understanding. There are 300 worked problems and 100 exercises in the book, as well as 306 figures to help the reader visualize the processes being addressed. Computer calculations and solutions are carried out using wxMaxima to give insight and help build computational skills. The book is aimed at first-year undergraduate students studying introductory physics and would also be useful for physics teachers in their instruction, particularly the exercises at the end of each chapter.

Diagrammatic Representation and Reasoning

Michael Anderson, Bernd Meyer, Patrick Olivier, 2011-06-27. Diagrams are essential in most fields of human activity. There is substantial interest in diagrams and their use in many academic disciplines for the potential benefits they may confer on a wide range of tasks. Are we now in a position to claim that we have a science of diagrams that is a science which takes the nature of diagrams and their use as the central phenomena of interest? If we have a science of diagrams, it is certainly constituted from multiple disciplines including cognitive science, psychology, artificial intelligence, logic, mathematics, and others. If there is a science of diagrams, then like other sciences, there is an applications or engineering discipline that exists alongside the science. Applications and engineering provide tests of the theories and principles discovered by the science and extend the scope of the phenomena to be studied by generating new uses of diagrams, new media for presenting diagrams, or novel classes of diagram. This applications and engineering side of the science of diagrams also comprises multiple disciplines including education, architecture, computer science, mathematics, human-computer interaction, knowledge acquisition, graphic design, engineering, history of science, statistics, medicine, biology, and others.

Experience in Learning Systems Evangelos Kapros,Maria Koutsombogera,2018-09-25 While the focus of the UX research and design discipline and the Learning Sciences and instructional design disciplines is often similar and almost always tangential there seems to exist a gap i e a lack of communication between the two fields Not much has been said about how UX Design can work hand in hand with instructional design to advance learning The goal of this book is to bridge this gap by presenting work that cuts through both fields To illustrate this gap in more detail we provide a combined view of UX Research and Design Educational Technology While the traditional view has perceived the Learning Experience Design as a field of Instructional Design we will highlight its connection with UX an aspect that has become increasingly relevant Our focus on user experience research and design has a unique emphasis on the human learning experience we strongly believe that in learning technology the technological part is only mediating the learning experience and we do not focus on technological advancements per se as we believe they are not the solution in themselves to the problems that education is facing This book aims to lay out the challenges and opportunities in this field and highlight them through research presented in the various chapters Thus it presents a unique opportunity to represent areas of learning technology that go very far beyond the MOOC and the classroom technology The book provides an outstanding overview and insights in the area and it aims to serve as a significant and valuable source for learning researchers and practitioners The chapter User requirements when designing learning e content interaction for all is available open access under a CC BY 4 0 license at link.springer.com
