γδ T Cell Cancer Immunotherapy Marta Barisa, 2024-10-17 *T Cell Cancer Immunotherapy Evidence Based Perspectives for Clinical Translation* sets out and critically discusses the current clinical and relevant preclinical T cell immunotherapy landscape. In five chapters, field experts discuss the challenges facing T cell oncoimmunotherapy, propose solutions, and map next steps. Particular attention is given to summarizing our understanding of the complex translationally relevant human T cell biology, the evidence basis for designing T cell combination trials, and data-driven perspectives on what is known and what isn't about T cell therapeutic persistence. Various perspectives are provided on how issues of cytotoxic effector function, functional exhaustion, and cytokine addiction can be mitigated using gene engineering. A chapter is dedicated to the systematic review of all T cell immunotherapy trials to date and the cell therapy products that were used in these trials. The final chapter discusses allograft persistence enhancement techniques in the context of T cell therapy, covering lymphodepleting chemotherapy and synthetic stealth engineering. *T Cell Cancer Immunotherapy Evidence Based Perspectives for Clinical Translation* gives an updated and comprehensive insight into the current state of T cell immunotherapy, which is of interest to existing translational T cell specialists, the proliferating range of academic scientists and commercial scientists entering the field, as well as clinicians who may encounter T cell immunotherapy in the clinic or are wishing to familiarize themselves with noncanonical lymphocyte immunotherapy. Summarizes the cutting edge of oncology-relevant T cell immunobiology. Lays out clinical successes and failures to date. Addresses the possible advantage of combining T cell-based immunotherapy with conventional chemotherapy or checkpoint blockers. Provides an up-to-date and well-rounded discussion of a translationally, commercially, and scientifically relevant field.
