General Layout of Diesel power plants

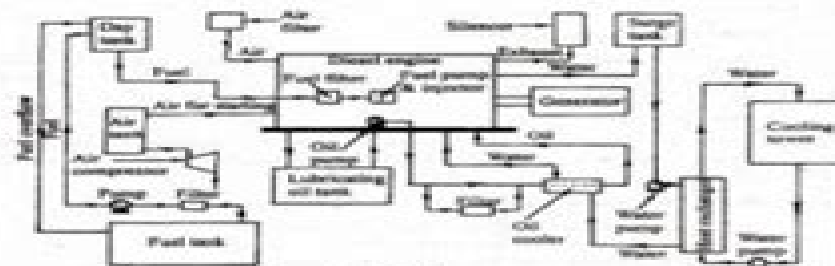

Figure 3.1

General Layout of Diesel power plants

Figure shows the arrangements of the engine and its auxiliaries in a diesel power plant. The major components of the plant are:

a) Engine

Engine is the heart of a diesel power plant. Engine is directly connected through a gear box to the generator. Generally two-stroke engines are used for power generation. Now a days, advanced super & turbo charged high speed engines are available for power production.

b) Air supply system

Air inlet is arranged outside the engine room. Air from the atmosphere is filtered by air filter and conveyed to the inlet manifold of engine. In large plants supercharger/turbocharger is used for increasing the pressure of input air which increases the power output.

c) Exhaust System
