Prioritization Theory and Defensive Foreign Policy Hanna Samir Kassab,2017-02-07 This book studies systemic vulnerabilities and their impact on states and individual survival The author theorizes that the structure of the international system is a product of the distribution of capabilities and vulnerabilities across states States function or behave in terms of these systemic threats The author examines a number of specific case studies focusing on military economic environmental political and cyber vulnerabilities and how different states are impacted by them Arguing that current attempts to securitize these vulnerabilities through defensive foreign policies are largely failing the books makes the case for prioritizing economic development and human security   **Management and Visualisation** Gordon Fletcher,2022-12-27 As organisations of all sizes become increasingly digitalised a core management challenge remains unresolved The ability to successfully and sustainably connect the stated vision of an organisation with its strategic plans and in turn with the reported reality of day to day operations is largely an elusive ambition despite the many stated advantages provided by contemporary technologies In this book the case is made for visual management as a method of communications planning learning and reporting that connects the organisation in a single meaningful and seamless way Throughout this book visual management is theorised around the position that all forms of management documentation are an artefact of human construction and of the

organisation itself that reflect learned patterns of activity The book places visual management as a more intuitive and seamless method of coordinating learning and communicating across an organisation than more traditional formats of presenting management documents Consciously assembling the artefacts of an organisation in order to manage it introduces a layer of criticality that encourages reflection and consistency that is often absent from current management practice The benefits that a visual approach brings to organisational management are an increasing necessity as machine learning robotics and process automation remove traditional roles from organisations and necessitate new views on how individuals now fit into a data informed business The book contributes to the academic debate regarding resource based and knowledge based views of the organisation by advocating a different more holistic viewpoint and will thus appeal to academics and researchers in this area It would also benefit students across business disciplines whilst the practical models and tools offered will benefit directors and managers looking to implement their own visual organisational language **Advances in Design and Digital Communication II** Nuno Martins,Daniel Brandão,2021-10-21 This book reports on research findings and practical lessons featuring advances in the areas of digital and interaction design graphic design and branding design education society and communication in design practice and related ones Gathering the proceedings of the 5th International Conference on Digital Design and Communication Digicom 2021 held on November 4 6 2021 in Barcelos Portugal and continuing the tradition of the previous book it describes new design strategies and solutions to foster digital communication within and between the society institutions and brands By highlighting innovative ideas and reporting on multidisciplinary projects it offers a source of inspiration for designers of all kinds including graphic and web designers UI UX and social media designers and to researchers advertisers artists and brand and corporate communication managers alike
