The Treatment of Iraqi Turks Since the Aftermath of Wwi Yawooz Ezzat,2012-07-17 The legacy of colonial power in many undeveloped countries in the aftermath of the First World War is closely linked with the many problems that those countries are now experiencing These problems are used as a smokescreen whenever the dominant countries of the world wish to further their interests these poorer nations can be manipulated through religion or nationalism or any other factor of expediency What has

happened throughout history i.e. before during and after WW1 was not through happenstance. But rather logic dictates that a sophisticated political plan has been in place and the long lasting cold war between the Eastern and Western Blocks driven by their contradicting beliefs over a universal political system has had the sole aim of gaining control over the vast oil and gas reserves of the region. Such machinations were evident in Central Namibia where genocidal crimes were committed against the Herero population by the German dictator and his soldiers and other ethnic groups were manipulated for the above purpose. This also happened in Algeria where the colonial power was France; the French supported a military junta who committed genocidal crimes over decades in the name of maintaining stability and control over the Mediterranean Sea. The Turkic descendants in Iraq have been subjected to similar methods i.e. ethnic cleansing since the aftermath of the WWI and for the same purpose. The main objective of this research therefore has been to develop an in depth analysis of the treatment of Iraqi Turks following WWI, arguing that the above systematic ethnic cleansing in Iraq has links with the colonial era. If Iraqis continue to ignore this fact and continue to blame each other, ethnic cleansing will continue and it may affect other groups as well. Yet the new world order and financial system is designed in such a way as to serve those aims and international law is too feeble to counter those plans. The ethnic cleansing in Iraq will remain unchanged as long as the political elite in Iraq continue to serve the aims of the great powers.

Hands,1984 The average annual water level on Lake Michigan rose 0.8 m between 1967 and 1973 causing adjustments in nearshore processes and topography Assuming 2 mm yr as a typical rate for sea level rise it would take 400 years to observe similar adjustments on an ocean beach The rapid rise in average water level is one of several features that makes the Great Lakes useful for testing concepts of shore response to sea level changes The key assumption in the Bruun concept of response to sea level rise is that the same average beach profile is reestablished relative to the higher water elevation This assumption was confirmed by detailed measurements over a 9 year period of 25 beach and offshore profile transects along 50 km of Lake Michigan shoreline Complete profile adjustment lagged 3 years behind the water level change A simple equation was developed expanding Brunn s concept to account for a gains and losses of sediment from causes other than the water level variation b erosion of different size sediments in the receding shoreface not all of which would be stable in the shore zone and c accretion of beach material during falling water levels The expanded Bruun sediment balance approach reduces the problem of estimating long term shore response to sea level rise to the simpler problem of determining an appropriate closure depth for the responding profile In the Great Lakes this closure depth can be estimated as about twice the 5 year return period wave height for the site under consideration **Multiple Criteria Decision Analysis for Industrial Engineering** Gerald William Evans,2016-12-01 This textbook presents methodologies and applications associated with multiple criteria decision analysis MCDA especially for those students with an interest in industrial engineering With respect to methodology the book covers 1 problem structuring methods 2 methods for ranking multi dimensional deterministic outcomes including multiattribute value theory the analytic hierarchy process the Technique for Order Preference by Similarity to Ideal Solution TOPSIS and outranking techniques 3 goal programming 4 methods for describing preference structures over single and multi dimensional probabilistic outcomes e g utility functions 5 decision trees and influence diagrams 6 methods for determining input probability distributions for decision trees influence diagrams and general simulation models and 7 the use of simulation modeling for decision analysis This textbook also offers Easy to follow descriptions of how to apply a wide variety of MCDA techniques Specific examples involving multiple objectives and or uncertainty risk of interest to industrial engineers A section on outranking techniques this group of techniques which is popular in Europe is very rarely mentioned as a methodology for MCDA in the United States A chapter on simulation as a useful tool for MCDA including ranking selection procedures Such material is rarely covered in courses in decision analysis

Both material review questions and problems at the end of each chapter Solutions to the exercises are found in the Solutions Manual which will be provided along with PowerPoint slides for each chapter The methodologies are demonstrated through the use of applications of interest to industrial engineers including those involving product mix optimization supplier selection distribution center location and transportation planning resource allocation and scheduling of a medical clinic staffing of a call center quality control project management production and inventory control and so on Specifically industrial engineering problems are structured as classical problems in multiple criteria decision analysis and the relevant methodologies are demonstrated

Learning with Fractional Orthogonal Kernel Classifiers in Support Vector Machines

Jamal Amani Rad, Kourosh Parand, Snehashish Chakraverty, 2023-03-18. This book contains select chapters on support vector algorithms from different perspectives including mathematical background, properties of various kernel functions and several applications. The main focus of this book is on orthogonal kernel functions and the properties of the classical kernel functions: Chebyshev, Legendre, Gegenbauer and Jacobi are reviewed in some chapters. Moreover, the fractional form of these kernel functions is introduced in the same chapters and for ease of use for these kernel functions a tutorial on a Python package named ORSVM is presented. The book also exhibits a variety of applications for support vector algorithms and in addition to the classification, these algorithms along with the introduced kernel functions are utilized for solving ordinary partial integro and fractional differential equations. On the other hand, nowadays the real time and big data applications of support vector algorithms are growing. Consequently, the Compute Unified Device Architecture (CUDA) parallelizing the procedure of support vector algorithms based on orthogonal kernel functions is presented. The book sheds light on how to use support vector algorithms based on

orthogonal kernel functions in different situations and gives a significant perspective to all machine learning and scientific machine learning researchers all around the world to utilize fractional orthogonal kernel functions in their pattern recognition or scientific computing problems
