*Digital Signal Processing with Matlab Examples, Volume 1* Jose Maria Giron-Sierra,2016-11-19 This is the first volume in a trilogy on modern Signal Processing The three books provide a concise exposition of signal processing topics and a guide to support individual practical exploration based on MATLAB programs This book includes MATLAB codes to illustrate each of the main steps of the theory offering a self contained guide suitable for independent study The code is embedded in the text

helping readers to put into practice the ideas and methods discussed The book is divided into three parts the first of which introduces readers to periodic and non periodic signals The second part is devoted to filtering which is an important and commonly used application The third part addresses more advanced topics including the analysis of real world non stationary signals and data e g structural fatigue earthquakes electro encephalograms birdsong etc The book s last chapter focuses on modulation an example of the intentional use of non stationary signals

Digital Signal Processing with Matlab Examples, Volume 3 Jose Maria Giron-Sierra,2016-11-21 This is the third volume in a trilogy on modern Signal Processing The three books provide a concise exposition of signal processing topics and a guide to support individual practical exploration based on MATLAB programs This book includes MATLAB codes to illustrate each of the main steps of the theory offering a self contained guide suitable for independent study The code is embedded in the text helping readers to put into practice the ideas and methods discussed The book primarily focuses on filter banks wavelets and images While the Fourier transform is adequate for periodic signals wavelets are more suitable for other cases such as short duration signals bursts spikes tweets lung sounds etc Both Fourier and wavelet transforms decompose signals into components Further both are also invertible so the original signals can be recovered from their components Compressed sensing has emerged as a promising idea One of the intended applications is networked devices or sensors which are now becoming a reality accordingly this topic is also addressed A selection of experiments that demonstrate image denoising applications are also included In the interest of reader friendliness the longer programs have been grouped in an appendix further a second appendix on optimization has been added to supplement the content of the last chapter
