Allen, Jitesh H. Panchal, Ramakrishnan S. Srinivasan, Jeffrey D. Tew, Farrokh Mistree, 2018-09-06 A fail safe supply network is designed to mitigate the impact of variations and disruptions on people and corporations This is achieved by 1 developing a network structure to mitigate the impact of disruptions that distort the network structure and 2 planning flow through the network to neutralize the effects of variations In this monograph we propose a framework develop mathematical models and provide examples of fail safe supply network design We show that contrary to current thinking as embodied in the supply network literature disruption management decisions made at the strategic network design level are not independent from variation management decisions

made at the operational level Accordingly we suggest that it is beneficial to manage disruptions and variations concurrently in supply networks This is achieved by architecting fail safe supply networks which are characterized by the following elements reliability robustness flexibility structural controllability and resilience Organizations can use the framework presented in this monograph to manage variations and disruptions Managers can select the best operational management strategies for their supply networks considering variations in supply and demand and identify the best network restoration strategies including facility fortification backup inventory flexible production capacity flexible inventory and transportation route reconfiguration The framework is generalizable to other complex engineered networks     *Advances in Production Management Systems: New Challenges, New Approaches* Bruno Vallespir,Thècle Alix,2010-10-19 The present economic and social environment has given rise to new situations within which companies must operate As a first example the globalization of the economy and the need for performance has led companies to outsource and then to operate inside networks of enterprises such as supply chains or virtual enterprises A second instance is related to environmental issues The statement about the impact of industrial activities on the environment has led companies to revise processes to save energy to optimize transportation A last example relates to knowledge Knowledge is considered today to be one of the main assets of a company How to capitalize to manage to reuse it for the benefit of the company is an important current issue The three examples above have no direct links However each of them constitutes a challenge that companies have to face today This book brings together the opinions of several leading researchers from all around the world Together they try to develop new approaches and find answers to those challenges Through the individual chapters of this book the authors present their understanding of the different challenges the concepts on which they are working the approaches they are developing and the tools they propose The book is composed of six parts each one focuses on a specific theme and is subdivided into subtopics
