Connecting People with Technology George Hayhoe, Helen M. M Grady, 2020-11-26 This book

explores five important areas where technology affects society and suggests ways in which human communication can facilitate the use of that technology Usability has become a foundational discipline in technical and professional communication that grows out of our rhetorical roots which emphasize purpose and audience As our appreciation of audience has grown beyond engineers and scientists to lay users of technology our appreciation of the diversity of those audiences in terms of age geography and other factors has similarly expanded We are also coming to grips with what Thomas Friedman calls the flat world a paradigm that influences how we communicate with members of other cultures and speakers of other languages And because most of the flatteners are either technologies themselves or technology driven technical and professional communicators need to leverage these technologies to serve global audiences Similarly we are inundated with information about world crises involving health and safety issues These crises are driven by the effects of terrorism the aging population HIV AIDS and both human made and natural disasters These issues are becoming more visible because they are literally matters of life and death Furthermore they are of special concern to audiences that technical and professional communicators have little experience targeting the shapers of public policy seniors adolescents and those affected by disaster Biotechnology is another area that has provided new roles for technical and professional communicators We are only beginning to understand how to communicate the science accurately without either deceiving or panicking our audience We need to develop a more sophisticated understanding of how communication can shape reactions to biotechnology developments Confronting this complex network of issues we re challenged to fashion both our message and the audience s perceptions ethically Finally today s corporate environment is being shaped by technology and the global nature of business Technical and professional communicators can play a role in capturing and managing knowledge in using technology effectively in the virtual workplace and in understanding how language shapes organizational culture

Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt,2017-08-08 This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book s main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4 0

Guide to the Software Engineering Body of Knowledge Alain Abran,James W. Moore,2001

Writing a Professional Life Gerald J. Savage,Dale L. Sullivan,2001 This is the first

collection of narratives by practicing technical communicators telling their own personal stories about the workplace and their lives on the job. The authors portray a wide range of jobs: writers, editors, interface designers, marketing writers, and trainers working in 9 different technical fields including software, R D, engineering, medicine, transportation, and telecommunications. The stories vividly demonstrate the unique power of narrative as a teaching and learning tool. Unlike fabricated cases, these real-life narratives show new and veteran technical writers at work on the job, dealing with tasks, clients, and co-workers, and revealing their insights, values, and attitudes about their work. The stories also show the skills required in the profession and the ethical and other issues raised in the course of the workday. For anyone interested in technical communication and professional writing.

User-Centered Technology Robert R. Johnson, 1998-01-01. Presents a theoretical model for examining technology through a user perspective.

Writing in the Health Professions Barbara Heiffron, 2005. Practical, applied, and up to the minute. *Writing for the Health Professions* teaches students, healthcare professionals, and professional writers the essential skills in medical and health communications. Drawing on her extensive experience as a nurse, cardio-pulmonary technician, medical writer, and writing teacher, Barbara Heiffron addresses the communications requirements of the healthcare professions and those who write in these high-tech fields. This comprehensive text covers writing situations and documents common in hospitals, clinics, HMOs, health insurance companies, public health campaigns, and other healthcare environments. Special attention is given to visual and electronic forms of communication, including Web sites and multimedia productions.

Systems Analysis and Design with UML Version 2.0 Alan Dennis, Barbara Haley Wixom, David Tegarden, 2005. A modern, hands-on approach to doing SAD in UML. Get the core skills you need to actually do systems analysis and design with this highly practical, hands-on approach to SAD using UML. Authors Alan Dennis, Barbara Haley Wixom, and David Tegarden guide you through each part of the SAD process with clear explanations of what it is and how to implement it, along with detailed examples and exercises that allow you to practice what you've learned. Now updated to include UML Version 2.0 and revised, this Second Edition features a new chapter on the Unified Process, increased coverage of project management, and more examples. *Highlights Written in UML*. The text takes a contemporary, object-oriented approach using UML. Focus on doing SAD. After presenting the how and what of each major technique, the text guides you through practice problems and then invites you to use the technique in a project. Rich examples of both success and failure. *Concepts in Action* boxes describe how real companies succeeded and failed in performing the activities in the chapters. *Project approach*. Each chapter focuses on a different step in the Systems Development Life Cycle (SDLC) process. Topics are presented in the order in which they are encountered in a typical project. A running case. This case threaded throughout the text allows you to apply each concept you have learned.
