Mastering the SAP Business Information Warehouse Kevin McDonald, Andreas Wilmsmeier, David C. Dixon, W. H. Inmon, 2002-10-02 This book is insightful and thought provoking for even the most seasoned SAP BW individual. Richard M. Dunning, Chair, American SAP Users Group. Written by the leading experts in the field, this comprehensive guide shows you how to implement the SAP Business Information Warehouse (BW) and create useful applications for business analysis of company-wide data. You'll quickly learn how to design, build, analyze, and administer the data and information in the SAP BW component. The authors present the material in a way that reflects the process an organization goes through during a software implementation. They begin with an introduction to the fundamentals of data warehousing and business intelligence, helping you determine if SAP BW is right for your organization. The book then focuses on the business content and options available when trying to deliver value from the data stored in the SAP BW. And it includes a methodology for implementing the BW, such as data modeling and techniques for capturing and transforming data. With this book, you'll discover the options available in SAP BW 3.0 and explore a new way to drive business performance. It will show you how to tackle such challenges as eliminating poor data quality, develop an information model in order to properly deploy SAP BW, utilize ETL, data storage, information access, analysis, and presentation services, schedule, monitor, archive, and troubleshoot data loads. Effectively plan and manage the performance of a data warehouse. The companion Web site provides useful guides and templates for configuring your system, industry case studies, and additional updates.

SUSE and IBM Power Systems for SAP HANA Michael Tabron, Alex Cabanes, IBM Redbooks, 2020-11-24 For organizations charting their way forward in today's digital economy, the clear

imperative is to find better ways of extracting more value from data. By glean insight from data regarding customer preferences and business operations organizations can respond to demand more effectively and better deliver the experiences that today's customers want. To this end many organizations running SAP solutions seek to make the move to the SAP HANA database. SAP HANA offers the speed of in memory data processing and the ability to combine transactions and analytics on a single platform for insight in real time. However considerations at the level of IT infrastructure can make or break the success of an SAP HANA implementation. What the database runs on in other words matters significantly. This IBM Redguide publication explores the value of deploying SAP HANA on SUSE Linux Enterprise Server for SAP Applications and the IBM Power platform with IBM POWER9™ processors. Both offerings are optimized to help your organization reap the rewards of SAP HANA while also transforming IT service delivery more generally. Designed for enterprise grade operations SUSE Linux Enterprise Server for SAP Applications offers an open source software defined infrastructure SDI that is optimized for SAP workloads. Reliable, fast and secure it also supports the automation that is needed to substantially free up IT staff from service deployment and management duties. Power Systems servers support SAP HANA implementations according to the SAP Tailored Data Center Integration TDI 5.0 specification. Optimized for scale up and scale out scenarios and built to support virtual persistent memory Power Systems servers help you provision faster, scale affordably and maximize uptime by persisting memory across virtual machines VMs and multiple SAP HANA instances. Both SUSE and IBM have partnered with SAP for decades to fine tune these offerings. Together SUSE and IBM solutions offer a way forward for deploying, optimizing and running SAP HANA implementations that is proven to be successful. This publication looks at various aspects of this combined offering in greater detail.
