SAP Transaction Manager module tracks Treasury trades through their full life cycle – from trade entry to payments to month-end processing to maturity of the trades. All accounting entries related to the trades are triggered by the trades and are posted directly to the SAP General Ledger.

Transaction Manager configuration is extensive when considering the several submodules within Transaction Manager (e.g., Money Market, Foreign Exchange, Securities, Derivatives, Commodities, and Trade Finance).

The Transaction Manager modules integrate well into other SAP modules, such as Cash Management and Financial Accounting.

Transaction Manager configuration is consistent wherever possible across different trade types. For example, there are basic differences between money market trades and derivative trades. Derivative trades have underlying assets, but money market trades do not. The configuration required for the different trade types is going to be different but is largely going to be driven by the definition of the product and transaction type configuration.

Invoice Verification for SAP Stephen Birchall, Invoice verification in SAP is an often misunderstood subject despite its central role in contributing to a company's fiscal health Adding to the confusion is the fact that it falls between two teams the MM team and the FI team and each assumes that the other is responsible for the design and configuration of Invoice Verification Although the process can be streamlined many organizations get the design and use of invoice verification wrong resulting in vendors not being paid and accounts being placed on stop which prevents further Purchase Orders from being processed until the vendor has been paid The aim of this book is to help readers fully understand the invoice verification process particularly the changes in ERP 6.0 If they get the design right then the process will run smoothly and vendors will be paid on time not too early either User input can be kept to a minimum and much of the process can be automatic There are one or two basic mistakes that are made during the design of the process and the guide highlights these and many other confusing areas and describes in simple terms the options available along with the consequences of getting it wrong
