Hilado, 1998-05-11 FROM THE INTRODUCTION Considerable effort has gone into the study of various aspects of

flammability and of various plastic materials so that these materials which are proving so useful to man will always be used in ways which will not compromise his safety The task is a continuing one because the family of plastics continues to grow and along with it its variety of applications Some of these future applications cannot even be conceived of at the present time The needs of man and his society are changing and with them the factors that affect his safety comfort and convenience A flammability handbook for plastics must necessarily involve a variety of sciences and technologies spread across the whole spectrum of human knowledge and it is impossible to discuss all the subjects in great depth Any details extracted for attention are brought because they are believed to be significant to the overall effort to make plastics as useful and safe as humanly possible

Hilyard, A. Cunningham, 2012-12-06 Foams are gas filled integral structures in which the gas is finely dispersed throughout a continuously connected solid phase The bulk density is usually substantially lower than that of the solid component and for the foams which form the focus for this book the volume fraction of the gas phase is considerably greater than 0.5 and in most instances in excess of 0.9 Many of the materials encountered in every day experience such as bread plants and trees structural materials for buildings comfort materials for domestic and automotive seating shock absorbers or car bumpers and materials for noise control have one thing in common the cellular nature of their physical structure Why are these structures so important in the natural and man made world The reasons are both technical and commercial From a technical viewpoint cellular materials offer 1 high specific stiffness and strength making them suitable for structural applications 2 close to ideal energy management hence their use in thermal and acoustic insulation vibration damping acoustic absorption and shock mitigation and 3 comfort hence their use for domestic and automotive seating
