*Algorithmics of Matching Under Preferences* David F. Manlove, 2013 Matching problems with preferences are all around us OCo they arise when agents seek to be allocated to one another on the basis of ranked preferences over potential outcomes Efficient algorithms are needed for producing matchings that optimise the satisfaction of the agents according to their preference lists In recent years there has been a sharp increase in the study of algorithmic aspects of matching problems with preferences partly reflecting the growing number of applications of these problems worldwide This book describes the most important results in this area providing a timely update to The Stable Marriage Problem Structure and Algorithms D Gusfield and R W Irving MIT Press 1989 in connection with stable matching problems whilst also broadening the scope to include matching problems with preferences under a range of alternative optimality criteria

**Software Engineering for Science** Jeffrey C. Carver, Neil P.

Chue Hong, George K. Thiruvathukal, 2016-11-03 *Software Engineering for Science* provides an in depth collection of peer reviewed chapters that describe experiences with applying software engineering practices to the development of scientific software. It provides a better understanding of how software engineering is and should be practiced and which software engineering practices are effective for scientific software. The book starts with a detailed overview of the Scientific Software Lifecycle and a general overview of the scientific software development process. It highlights key issues commonly arising during scientific software development as well as solutions to these problems. The second part of the book provides examples of the use of testing in scientific software development including key issues and challenges. The chapters then describe solutions and case studies aimed at applying testing to scientific software development efforts. The final part of the book provides examples of applying software engineering techniques to scientific software including not only computational modeling but also software for data management and analysis. The authors describe their experiences and lessons learned from developing complex scientific software in different domains. About the Editors: Jeffrey Carver is an Associate Professor in the Department of Computer Science at the University of Alabama. He is one of the primary organizers of the workshop series on Software Engineering for Science (<http://www.SE4Science.org/workshops>). Neil P. Chue Hong is Director of the Software Sustainability Institute at the University of Edinburgh. His research interests include barriers and incentives in research software ecosystems and the role of software as a research object. George K. Thiruvathukal is Professor of Computer Science at Loyola University Chicago and Visiting Faculty at Argonne National Laboratory.
