**Discrete Mathematics For Teachers** Ed Wheeler, Jim Brawner, 2010-06-01 Originally Published by Houghton Mifflin Company 2004 There is a national consensus that teachers who teach middle grades and elementary mathematics need deeper and broader exposure to mathematics in both their undergraduate and in their graduate studies The Mathematics Education of Teachers published by The Conference Board on the Mathematical Sciences recommends 21 semester hours of mathematics for prospective teachers of middle grades mathematics In several states pre service teachers preparing to teach middle grades mathematics and pre service teachers preparing to teach elementary school must complete 6 9 semester hours of mathematics content at the junior senior level Graduate schools across the nation have developed special programs for educators who specialize in teaching mathematics to elementary school children and to middle grades students However there is a paucity of text materials to support those efforts at junior senior level and graduate level courses Faculty members must choose to teach yet another course out of one of the Mathematics for Teachers texts that have formed the basis of the curriculum for the last two decades These texts tend to treat a very limited set of topics on a somewhat superficial level Alternatively faculty members can use mathematics textbooks written primarily for students majoring in

mathematics or the sciences Neither the topic choice nor the pedagogical style of these texts is optimal for pre service and in service teachers of middle grades and elementary mathematics Discrete Mathematics for Teachers is a text designed to fill this void The topic is right Discrete mathematics provides a rich and varied source of problems for exploration and communication expands knowledge of mathematics in directions related to elementary and middle school curricula and is easily presented using our best understanding of the ways that mathematics is learned and taught The presentation is right In the spirit of NCTM s Principles and Standards for School Mathematics topics are presented with careful attention to the best traditions of problem solving reasoning and proof communication connections with other disciplines and other areas of mathematics and varied modes of representation

**Integer Programming and Related Areas** C. Kastning, 2013-11-11 Integer Programing is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut fur Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
